# FOREWORD

Interest in education improvement and renewal which heightened during the early 1980s continues to capture the attention of researchers, policymakers, and the public. While much has been done to enhance public education programs and services, much work and many challenges remain. In this setting, NEA Research offers *Rankings of the States, 1986* to its state and local affiliates as a tool for use throughout this period of public school reform.

*Rankings of the States* provides state-level data on an array of topics relevant to the complex enterprise of public education. State-by-state figures on government and school financing, state demographics, and public school personnel permit a statistical assessment of the scope of public education and an identification of emerging trends in key areas.

The *Rankings* report enjoys a long history of use by affiliates of the NEA as well as by planners and policymakers in other organizations. It has, since the 1960s, presented facts and figures useful in determining where states vary from one another or from national averages on selected statistics, and explanations as to how the reported data reflect social and economic characteristics and changes. Of course, no one table or set of them can tell the entire story of a state's education offerings. One must consider a state's tax system, its provision of other public services, the characteristics of its population, and more. It is therefore unwise to draw conclusions solely from the tables in this report, and the reader is urged to supplement these rank-ordered data with specific information about state and local activities and services related to public education.

Please note that the content of the A Series is different from that of previous years. Additional information about this change appears in the Technical Notes.

State department of education staff who contributed to this report deserve much credit for the current public school data it presents, as do the state education associations across the country.

*NEA Research*

*August 1986*

# TECHNICAL NOTES

*Rankings of the States, 1986* contains rank-ordered statistics for the fifty states and the District of Columbia. All state data are ranked beginning with the largest figure. When the values of two or more states are the same, they are assigned the same rank, with the appropriate number resumed with the next state in rank.

Please note that *Rankings of the States, 1986* features revised figures for some public school data previously published in *Estimates of School Statistics, 1985-86*, another report of NEA Research published in April 1986. State education agencies were invited to review their fall 1985 estimates and revise them for inclusion in this report. For this reason, estimated data in B, C, F, and H Series may differ from those in *Estimates of School Statistics*.

When necessary, NEA Research develops estimated data for tables appearing in Series B, C, F, and H Tables. Please note these instances in the pages immediately following the Series.

This edition of *Rankings of the States* reflects the absence of selected federal government data sources, most notably, age-group estimates of resident population by state usually featured in the A Series Tables. The Bureau of the Census did not develop those data in time for their use in *Rankings*, reportedly due to budgetary restrictions resulting from the Balanced Budget and Emergency Deficit Reduction Law of 1985, better known as the Gramm-Rudman-Hollings amendment. For this reason, tables in the A Series are fewer in number and scope. For example, state-by-state estimates for population age 5-17, age 65 and over, and age 21 and over are not presented in this year's report. Also, enrollment and staffing information for higher education institutions are not included in this edition of *Rankings of the States*, affecting tables in the B and C Series. While every effort has been made to obtain current information, the availability of data from federal government and other sources dictates the presence or absence of certain tables in this report.

One other change to be noted in this edition of *Rankings of the States* involves tables featuring Average Daily Membership (ADM). These tables will no longer contain values for the U.S. as a whole, since five states do not compute or provide estimates for their statewide ADM. Previously, totals and/or averages for the U.S. ADM were estimated by NEA Research based on the forty-four state values plus the District of Columbia. Beginning with this edition of *Rankings*, the U.S. totals or computations for ADM will show "NA." Tables affected by this change include: B-5, B-6, H-14 and H-15.

Tables D-14 and D-15 feature data from the *Sales and Marketing Management Survey of Buying Power*, a copyrighted work. Reproduction of these tables is prohibited unless permission is obtained directly from Sales and Marketing Management, 633 Third Avenue, New York, New York, 10017.

GLOSSARY ..... 58

INDEX ..... 61

# POPULATION

Tables in the A Series provide information about the population of states, and can serve as indicators of the relative demand for public education services or other public programs.

The level and change in total state population are featured in Tables A-1 through A-4, and help to identify patterns of growth or decline for each state, and the resulting implications for staffing and financing public education institutions. Population density is computed in Table A-7, while the number of births by state is the focus of A-5 and A-6.

Population data normally presented in this Series, specifically, state age-group estimates, are not included this year due to delays in the Bureau of the Census. The absence of these age-group estimates is unfortunate, as they provide a great deal of information about state population characteristics and the likely demand for public education services and other programs. Readers are referred to the 1985 edition of this report for 1984 age-group estimates by state.

Bureau of the Census, *Statistical Abstract of the United States, 1986*, p. 16.

## ENROLLMENT, ATTENDANCE, AND MEMBERSHIP

Tables in the B Series feature data on student participation in public elementary and secondary schools. The tables include current statistics on pupils enrolled, and the change in enrollment over the previous year and over a decade. These tables enable assessments of the states which can expect to experience increasing demand for public school services and staff.

Alternative measures of public school participation also are included in this Series. Average Daily Attendance (ADA) and Average Daily Membership (ADM) are presented in Tables B-4 through B-7, and differ from fall enrollment counts in that they present averages of pupil participation *year round*. Departments of education in five states do not provide data for ADM, and these instances are identified as "NA" in Tables B-5 and B-6, and throughout other Series as appropriate. Also, there are no U.S. totals or computed averages using ADM, as national figures for this measure cannot be considered to represent totals or averages for all states.

Table B-8 shows the percent change in the number of high school graduates over a five-year period, useful in predicting demand for higher education services in future years.

Footnotes to the B Series tables note the instances where the NEA has had to formulate estimates of public school statistics, in the absence of estimated data from state education departments.

## NOTES TO B SERIES TABLES

NEA Research estimates for selected variables within the B Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | B-4 through B-7 |
| California | B-8 |
| District | B-8 |
| Louisiana | B-4 through B-7 |
| Nevada | B-4, B-6, B-7 |
| Oklahoma | B-4 through B-7 |
| Pennsylvania | B-4 through B-7 |
| Wisconsin | B-4 through B-7 |

# FACULTY

Personnel in local public schools and in public institutions of higher education are the focus of tables in the C Series. Changes in the number of staff employed in education institutions as well as their levels of compensation reflect trends in enrollment, economic trends, and in the program priorities expressed by state residents.

The number of staff employed in public schools and public institutions of higher education are featured in Tables C-1 through C-4, while three measures of pupil load—pupils enrolled per teacher, pupils in ADA per teacher, and pupils in ADM per teacher—follow in Tables C-5 through C-7.

Average salaries of public classroom teachers and total instructional staff are featured in C-9 through C-22. These average salary data are presented in "current" or unadjusted dollars, and also in "constant" or inflation-adjusted dollars. These computations employ the Consumer Price Index for all Urban Consumers (CPI-U), converted to a school-year basis, using the 1975-76 school year as the base (1975-76=100.0).

The presentation of salary changes in constant-dollar terms enables identification of salary increases attributable to inflation. The resulting picture for most states is a salary gain over the past decade far below what the public may intend or know of. As an advocacy tool, the use of these salary data can do much to dispel myths of huge jumps in the purchasing power of teacher salaries.

Footnotes to C Series tables appear at the end of this section. These notes identify instances where NEA-estimated data appear in lieu of estimates from state education agencies.

# NOTES TO C SERIES TABLES

NEA Research estimates for selected variables within the C Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | C-1, C-5 through C-22 |
| Arizona | C-1, C-5 through C-22 |
| District | C-9 through C-22 |
| Kansas | C-8 |
| Louisiana | C-6, C-7 |
| Maryland | C-8 |
| Massachusetts | C-8, C-16 through C-22 |
| Michigan | C-8, C-16 through C-22 |
| Mississippi | C-8 |
| Nebraska | C-9 through C-22 |
| Nevada | C-6 |
| New Hampshire | C-16 through C-22 |
| Oklahoma | C-6, C-7 |
| Pennsylvania | C-6, C-7 |
| Vermont | C-1, C-5 through C-22 |
| Wisconsin | C-6, C-7 |

The following state education departments provided additional information to help explain data reported for their states in C Series Tables:

Ohio — Teacher salaries reported for 1984-85 and 1985-86 do not include supplemental pay.

Texas — Previous estimates of average teacher salaries did not take into account career ladder supplements first awarded to teachers in 1984-85. In 1984-85, approximately 70,000 teachers received supplements of between $1,500 to $2,000 for excellence in teaching.

Utah — Average classroom teacher salaries do not include compensation provided through the state-funded career ladder program, estimated at an average of $858 in 1984-85 and $1,695 for 1985-86.

# GENERAL FINANCIAL RESOURCES

Personal income measures the overall economic activity within a specific geographic area. State personal income is defined as the aggregate or total income from *all* sources received by persons residing in a state, and has a significant effect on the total income or financial resources available to governmental jurisdictions through taxation. This, in turn, affects the prospects for financing public education and other services. Indeed, state personal income is used throughout the tables in this report to gauge the ability and effort of states to generate funds for public programs, and is considered by some to present a better method of comparison than the use of state population data for per capita computations.

Tables D-1 and D-2 compare states on their total personal income and the percentage gain in each state. Per capita personal income is featured in Tables D-3 through D-6, providing more detail about the relative financial well-being of individuals within each state through the use of statewide population as a common denominator.

*Disposable personal income* represents the personal income of residents *minus* taxes and other required payments, such as fines, penalties, and fees. Disposable personal income reflects the amount of income remaining for expenditure on consumer goods, for example, and represents a different measure of "wealth" among states. Tables D-8 through D-10 feature *per capita* disposable personal income, or the amount of personal income for every person in each state, thereby providing some comparability across states for this measure.

Table D-11 compares the states on a measure of personal income geared more closely to the consumers of public education services—the number of pupils as measured in average daily attendance. Table D-13 shows the relative significance of government activity as it contributes to total personal income, by measuring personal income from government enterprises as a percent of the total. Income from farming activities is compared by state in Table D-13, while Tables D-14 and D-15 contain average household buying incomes and retail sales per household, measures similar to disposable personal income in their approximation of consumer spending power in each state.

# NOTES TO D SERIES TABLES

NEA Research estimates for selected variables within the D Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | D-11 |
| Louisiana | D-11 |
| Nevada | D-11 |
| Oklahoma | D-11 |
| Pennsylvania | D-11 |
| Wisconsin | D-11 |

# GOVERNMENTAL REVENUE

Revenue of state and local governments, principally revenue generated through taxation, is the subject of tables in the E Series. These tables contain comparative information about the amounts and significance of selected tax sources by state, providing insight into the financial resources of government that are available for financing public education.

General revenue, own-source revenue, and tax collections are presented for state and local governments. Revenue data are expressed on a per resident basis, or as proportions of state personal income. The latter expression, found in Tables E-3, E-5, E-9, E-12, E-15, and E-16, indicates that for every $1,000 of personal income in a state, a certain amount of revenue (sales tax revenue, e.g.) is generated. This is referred to as the "tax effort" of government units, and also can be computed for expenditure categories, as shown in Series G and H.

Tables E-13 through E-15 feature state revenue from general sales and from individual income taxes, expressed on a per capita basis and per $1,000 of state personal income. Please note that low amounts appear for several states, indicating that those taxes are restricted in some fashion, such as the income tax on individuals in New Hampshire. Please consult references on state tax characteristics for clarifying information.

# SCHOOL REVENUE

F Series Tables compare states on their sources of public school revenue. Funds received by public school districts from federal, state, and from local sources are listed for each state, and are expressed in relation to the number of pupils in each state, to the state's personal income, and according to the percentage distribution across the three government sources.

The tables that follow examine the states' relative positions with regard to school revenues per $1,000 of state personal income (F-3, F-4). These measures, as with the examples in the E Series, make it easier to compare the effort of government units to provide financial support for public school programs through measurement of that support with the common denominator of personal income.

Please note that the school revenue data contained in F Series tables update those featured in *Estimates of School Statistics, 1985-86*, published in April. State education departments have the option of revising their estimated data for inclusion in *Rankings*.

Also, estimated data developed by NEA Research are used in F Series Tables when state education agencies do not provide them. Please note these exceptions in the footnotes following the F Series.

## NOTES TO F SERIES TABLES

NEA Research estimates for selected variables within the F Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | All |
| Arizona | F-3 through F-11 |
| Louisiana | F-1, F-2 |
| Michigan | F-3 through F-11 |
| Nevada | F-1, F-2 |
| New Hampshire | All |
| Oklahoma | F-1, F-2 |
| Pennsylvania | F-1, F-2 |
| Wisconsin | F-1, F-2 |

# GOVERNMENT EXPENDITURES

State and local government spending characteristics provide useful comparative information about the resources, needs and priorities for public services. Expenditures for government programs vary across states for many reasons, and state-by-state comparisons should be made while keeping them in mind—demographic, economic, and political factors are but a few.

Tables in the G Series describe the spending done by state governments and by state and local governments combined. Expenditure data are expressed on a per capita basis, allowing closer comparison of the differences in levels and objects of state and local government spending, as well as their positions relative to the U.S. average. Use of state personal income in selected tables provides opportunities for comparing the relative "effort" of government units to fund program areas, including public education.

# SCHOOL EXPENDITURES

Expenditures for public education often are compared among states through the use of measures contained in this section. Expenditures for elementary-secondary schools and for higher education can serve as indicators of state and local government "effort" to fund these services. Examples of measures used to compare states on spending for education include current expenditures per pupil in Average Daily Attendance (ADA) or Average Daily Membership (ADM)—two common measurements of education support. In addition, school expenditure data are displayed in relation to state population, state personal income, as percentages of total state expenditures, or as proportions of national averages.

Expenditure data are shown for elementary and secondary schools in combination with higher education, and with K-12 spending featured separately. Again, knowledge about public education systems and their funding characteristics is required to make fair comparisons of state-local government financial support of education, relative to that found in other states.

State education agency estimates of elementary-secondary expenditures appear throughout tables in H Series. NEA Research estimates were used when state agency data were not provided. Please note these instances in the footnotes section immediately following the series.

# GLOSSARY

AVERAGE DAILY ATTENDANCE: Average of pupils attending when schools are actually in session.

AVERAGE DAILY MEMBERSHIP: An average of the pupils belonging, those present plus those absent, when schools are actually in session.

BASIC ADMINISTRATIVE UNIT: The local school district; the unit for the operation of elementary and secondary schools or for contracting for school services.

CAPITAL OUTLAY: An expenditure that results in the acquisition of fixed assets or additions to fixed assets, which are presumed to have benefits for more than one year. It is an expenditure for land or existing buildings; improvements of grounds; construction of buildings; additions to buildings; remodeling of buildings; initial, additional, and replacement of equipment.

CURRENT EXPENDITURES: All amounts spent at all levels of administration—state, intermediate, and local—for public elementary and secondary day schools for administration, instructional services, plant operation and maintenance, fixed charges, and other school services (attendance, health services, transportation, food services, etc.). Includes the cost of operating the state department of education and the intermediate (county) departments of education; employers' (state, intermediate, and local) contributions to retirement systems and/or social security on behalf of public school employees; and federal, state, and local funds to cover deficits (gross expenditure less sales) of school lunch and milk programs.

DEBT: The major portion of all state and local government debt is long-term indebtedness. A substantial portion of such long-term debt is nonguaranteed debt, i.e., obligations payable solely from pledged earnings of specific activities or facilities, from special assessments, or from specific nonproperty taxes.

EDUCATION: The provision or support of schools and other education facilities and services.

EFFECTIVE BUYING INCOME: Same as disposable personal income; is obtained by deducting from personal income direct personal taxes and certain other nontax payments to government. The personal taxes deducted include federal, state, and local income taxes, estate and gift taxes, and miscellaneous licenses and permits. Property taxes are not deducted.

ENROLLMENT: A cumulative count of the number of different pupils registered during the entire school year. New entrants are added, but those leaving are not subtracted.

EXPENDITURES: All amounts of money paid out by a government—net of recoveries and other correcting transactions—other than for retirement of debt, investment in securities, extension of credit, or as agency transactions. Expenditures includes only external transactions of a government and excludes noncash transactions, such as the provision of perquisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments involved.

FALL ENROLLMENT: The count of the pupils registered in the fall of the school year, usually October.

FIRE PROTECTION: Comprises fire-fighting and fire-protection activities of local governments.

FUNCTIONS: Public purposes served by governmental activities (education, highways, public welfare, etc.). Expenditures for each function includes amounts for all types of expenditures serving the purpose concerned.

GENERAL EXPENDITURE: All expenditures of a government other than utility expenditures, liquor store expenditures, and insurance trust expenditures.

GENERAL REVENUE: All revenue of a government except the kinds of revenue classified as utility revenue, liquor store revenue, and insurance trust revenue. All tax collections, even if designated for insurance trust or local utility purposes, are classified under general revenue.

GENERAL SALES TAXES: Sales or gross receipts taxes which are applicable, with only specified exceptions, to all types of goods and services, or all gross income, whether at a single or at classified rates.

HEALTH: Health services, other than hospital care, including health research, clinics, nursing, immunization, and other categorical, environmental, and general public health activities. School health services provided by health agencies (rather than school agency) are included.

1130

HIGHWAYS: Streets, highways, and structures necessary for their use; street lighting; snow and ice removal; toll highway and bridge facilities; and ferries.

HIGHER EDUCATION: Includes facilities and activities of all education institutions beyond the high school level operated by state or local governments, except that agricultural experiment stations and agricultural extension services are classified under natural resources, and university-operated hospitals serving the public are classed under hospitals. These education categories include related services such as pupil transportation, school milk and lunch programs, cafeterias, health and recreational programs, and the like. Revenue and expenditures for school lunch services, dormitories, athletic events, and other auxiliary services are included on a gross basis.

HOSPITALS: Establishment and operation of hospital facilities, provision of hospital care, and support of other public or private hospitals.

HOUSEHOLD: A unit that includes all persons occupying a house, apartment, or room regarded as a dwelling unit, excluding group quarters such as dormitories.

INDIVIDUAL INCOME TAX: Taxes on individuals measured by net income, and taxes imposed on special types of income (e.g., interest, dividends, and income from intangibles).

INSTRUCTIONAL STAFF: Number of positions, not the number of different individuals occupying the positions during the school year. In local schools includes all public elementary and secondary (junior and senior high) day school positions (or full-time equivalents) that are in the nature of teaching or in the improvement of the teaching-learning situation. Includes consultants or supervisors of instruction, principals, teachers, guidance personnel, librarians, psychological personnel, and other instructional staff. Excludes attendance personnel, health services personnel, clerical personnel, and junior college staff. In institutions of higher education includes those engaged in teaching and related academic research in junior colleges, colleges, and universities, including those in hospitals, agricultural experiment stations and farms.

INTEREST ON DEBT: Annual expenditures to pay interest only on long-term debt.

LIVE BIRTHS: Number of births in the U.S.

NONINSTRUCTIONAL STAFF: In local schools includes administrative and clerical personnel; plant operation and maintenance employees; bus drivers; lunchroom, health, and recreational personnel engaged by school systems. In institutions of higher education includes cafeteria workers, clerical and custodial workers in colleges and universities, hospitals, agricultural experiment stations, and farms.

PERSONAL INCOME: State personal income is the current income received by residents of the states from all sources, including transfers from government and business, but excluding transfers among persons. It is a before-tax measure. The total includes nonmonetary income or income received in kind. The figures include income of individuals and also income of nonprofit institutions; private trust funds; and private pension, health, and welfare funds.

POLICE PROTECTION: Preservation of law and order and traffic safety. Includes highway police patrols, crime prevention activities, police communications, detention and custody of persons awaiting trial, traffic safety, vehicular inspection, and the like.

PROPERTY TAXES: Taxes conditioned on ownership of property and measured by its value. Includes both general property taxes (i.e., relating to property as a whole, real and personal, tangible or intangible, whether taxed at a single rate or at classified rates) and special property taxes (i.e., on selected types of property, such as motor vehicles or certain or all tangibles, subject to rates that are not directly related to rates applying for general property taxation).

PUBLIC WELFARE: Support of and assistance to eligible persons contingent upon their need. Excludes pensions to former employees and other benefits not contingent on need. Expenditures under this heading include cash assistance payments directly to needy persons under categorical and other welfare programs; vendor payments made directly to private purveyors for medical care, burials, and other services provided under welfare programs; welfare institutions; and any intergovernmental or other direct expenditures for welfare purposes. Any services provided directly by the government through its hospital and health agencies are classed under those headings.

RESIDENT POPULATION: In addition to those who are residents of an area, the figure also includes armed forces personnel who are stationed in the area.

REVENUE: Revenue receipts for public school purposes from LOCAL, intermediate and other sources include all funds for direct expenditures by local and intermediate districts for school services, for the operation of intermediate departments of education,

1181

for employer contributions to retirement systems and/or social security on behalf of public school employees, for the purchase of materials for distribution of local school districts, etc. Includes net receipts from revolving funds or clearing accounts only when such funds are available for general expenditure by the local board of education. Includes gifts and tuition and fees received from patrons.

Revenue receipts from STATE sources include all funds for the operation of the state department of education, for state (employer) contributions to retirement systems and/or social security on behalf of school employees, for grants in aid to intermediate and local school districts for school purposes (including funds available from state bond issues for such grants and the costs of textbooks, buses, supplies, etc., purchased by the state for distribution to local school districts), for the payment of interest on state bonds issued to provide grants to local school districts, and all other state revenue for public school purposes. Money collected by the state as an agent of a lesser unit and turned over in like amounts to that unit is not included.

Revenue receipts from FEDERAL sources include money distributed from the federal treasury either directly to local school districts or through the state and county, including grants for vocational education, for aid to federally affected areas, for National Defense Education Act programs, for school lunch and milk programs, for educating Indians in local public schools, and money derived from federal forest reserves and federal oil royalties. (No special effort is made to include amount of grants in kind, for example, operation of the school lunch program).

REVENUE FROM OWN SOURCES: All revenue of a government (taxes and other) except intergovernmental.

TAXES: Compulsory contributions exacted by a government for public purposes, except employee and employer assessments for retirement and social insurance purposes, which are classed as insurance trust revenue. All tax revenue is classified under general revenue and comprises amounts received (including interest and penalties but excluding refunds) from taxes imposed by the recipient government. Amounts received by a government from a tax it imposes are counted as tax revenue of that government, even though initially collected by another government; however, any amounts retained are treated as tax revenue of the collecting government. Tax amounts subsequently distributed to other governments are classified as intergovernmental transactions.

TOTAL REVENUE RECEIPTS: Includes all revenue receipts available for expenditure for current expenses, capital outlay, and debt service for public schools, including all appropriations from general funds of federal, state, county, and local governments; receipts from taxes levied for school purposes; income from permanent school funds and endowments; income from leases of school lands; interest on bank deposits; tuition; gifts; etc. Amounts that increase the school indebtedness or that represent exchange of school property for money are excluded.

# FOREWORD

Interest in education improvement and renewal which heightened during the early 1980s continues to capture the attention of researchers, policymakers, and the public. While much has been done to enhance public education programs and services, much work and many challenges remain. In this setting, NEA Research offers *Rankings of the States, 1987* to its state and local affiliates as a tool for use throughout this period of public school reform.

*Rankings of the States* provides state-level data on an array of topics relevant to the complex enterprise of public education. State-by-state figures on government and school financing, state demographics, and public school personnel permit a statistical assessment of the scope of public education and an identification of emerging trends in key areas.

The *Rankings* report enjoys a long history of use by affiliates of the NEA as well as by planners and policymakers in other organizations. It has, since the 1960s, presented facts and figures useful in determining where states vary from one another or from national averages on selected statistics, and explanations as to how the reported data reflect social and economic characteristics and changes. Of course, no one table or set of them can tell the entire story of a state's education offerings. One must consider a state's tax system, its provision of other public services, the characteristics of its population, and more. It is therefore unwise to draw conclusions solely from the tables in this report, and the reader is urged to supplement these rank-ordered data with specific information about state and local activities and services related to public education.

State department of education staff who contributed to this report deserve much credit for the current public school data it presents, as do the state education associations across the country.

*NEA Research*

*September 1987*

# POPULATION

Tables in the A Series provide information about the population of states and can serve as indicators of the relative demand for public education services or other public programs.

The level and change in total state population are featured in Tables A-1 through A-4. These tables help to identify patterns of growth or decline for each state and the resulting implications for staffing and financing public education institutions. Population density is computed in Table A-12, while the number of births by state is the focus of A-10 and A-11.

School-age population data in Tables A-5 and A-6 focus directly on the consumers of public elementary and secondary education. Combining these figures with public school enrollment tables in B Series can indicate demand for and participation in public school services.

Tables A-7 through A-9 define the adult population within states. Changes in the size of adult and elderly age groups affect demand for public school programs and the degree to which funding for education faces competition from other public sector programs. These tables also can indicate the willingness of citizens within a state to support public education.

## ENROLLMENT, ATTENDANCE, AND MEMBERSHIP

Tables in the B Series feature data on student participation in public elementary and secondary schools. The tables include current statistics on pupils enrolled, and the change in enrollment over the previous year and over a decade. These tables enable assessments of the states which can expect to experience increasing demand for public school services and staff.

Alternative measures of public school participation also are included in this Series. Average Daily Attendance (ADA) and Average Daily Membership (ADM) are presented in Tables B-4 through B-7, and differ from fall enrollment counts in that they present averages of pupil participation *year round*. Departments of education in six states do not provide data for ADM, and these instances are identified as "NA" in Tables B-5 and B-6, and throughout other Series as appropriate. Also, there are no U.S. totals or computed averages using ADM, as national figures for this measure cannot be considered to represent totals or averages for all states.

Table B-8 shows the percent change in the number of high school graduates over a five-year period, useful in predicting demand for higher education services in future years.

Footnotes to the B Series tables note the instances where the NEA has had to formulate estimates of public school statistics, in the absence of estimated data from state education departments.

# NOTES TO B SERIES TABLES

NEA Research estimates for selected variables within the B Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | All |
| Arizona | B-2 through B-8 |
| California | All |
| Georgia | B-4 through B-8 |
| Kansas | B-8 |
| Louisiana | All |
| Massachusetts | All |
| Michigan | B-4 through B-8 |
| Vermont | B-4 through B-8 |

The following state education departments provided additional information to help explain data reported for their states in B Series Tables:

| | |
|---|---|
| Indiana | 1986-87 Fall Enrollment data are estimated figures. |
| Louisiana | Changes were made to reflect the October 1, 1986 membership from an auditable source. These numbers include self-contained special education classified as elementary or secondary based on age. |

# FACULTY

Personnel in local public schools and in public institutions of higher education are the focus of tables in the C Series. Changes in the number of staff employed in education institutions as well as their levels of compensation reflect trends in enrollment, economic trends, and in the program priorities expressed by state residents.

The number of staff employed in public schools is featured in Table C-1. Please note that statistics for staff employed in public institutions of higher education, Tables C-2 through C-4, are reprints from last year's issue. Unfortunately, necessary statistics on full-time equivalent employment were not available from the Bureau of the Census because of delays caused by changes in the computation formula. Three tables of pupil load—pupils enrolled per teacher, pupils in ADA per teacher, and pupils in ADM per teacher—are presented in Tables C-5 through C-7.

Average salaries of public classroom teachers and total instructional staff are featured in C-9 through C-22. These average salary data are presented in "current" or unadjusted dollars, and also in "constant" or inflation-adjusted dollars. These computations employ the Consumer Price Index for all Urban Consumers (CPI-U), converted to a school-year basis, using the 1976-77 school year as the base (1976-77=100.0).

The presentation of salary changes in constant-dollar terms enables identification of salary increases attributable to inflation. The resulting picture for most states is a salary gain over the past decade far below what the public may intend or know of. As an advocacy tool, the use of these salary data can do much to dispel myths of huge jumps in the purchasing power of teacher salaries.

Footnotes to C Series tables appear at the end of this section. These notes identify instances where NEA-estimated data appear in lieu of estimates from state education agencies.

# NOTES TO C SERIES TABLES

NEA Research estimates for selected variables within the C Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | C-1, C-5 through C-22 |
| Arizona | C-16 through C-22 |
| California | C-1, C-5 through C-22 |
| Georgia | C-6 through C-22 |
| Kansas | C-8 |
| Louisiana | C-1, C-5 through C-22 |
| Massachusetts | C-1, C-5 through C-22 |
| Vermont | C-1, C-5 through C-22 |

The following state education departments provided additional information to help explain data reported for their states in C Series Tables:

| | |
|---|---|
| Indiana | 1986-87 average salary data are estimated figures. |
| Louisiana | Salary data reflect severe budget cuts. |
| New Mexico | Consistent with instructions, increments for additional duties are not included in 1986-87 average salary of instructional staff. |
| Oregon | Salary includes a 6 percent employer pickup of the employee portion of retirement contribution. |
| Texas | Teacher salary includes career ladder supplement. |

# GENERAL FINANCIAL RESOURCES

Personal income measures the overall economic activity within a specific geographic area. State personal income is defined as the aggregate or total income from *all* sources received by persons residing in a state, and has a significant effect on the total income or financial resources available to governmental jurisdictions through taxation. This, in turn, affects the prospects for financing public education and other services. Indeed, state personal income is used throughout the tables in this report to gauge the ability and effort of states to generate funds for public programs, and is considered by some to present a better method of comparison than the use of state population data for per capita computations.

Tables D-1 and D-2 compare states on their total personal income and the percentage gain in each state. Per capita personal income is featured in Tables D-3 through D-6, providing more detail about the relative financial well-being of individuals within each state through the use of statewide population as a common denominator.

*Disposable personal income* represents the personal income of residents *minus* taxes and other required payments, such as fines, penalties, and fees. Disposable personal income reflects the amount of income remaining for expenditure on consumer goods, for example, and represents a different measure of "wealth" among states. Tables D-8 through D-10 feature *per capita* disposable personal income, or the amount of personal income for every person in each state, thereby providing some comparability across states for this measure.

Table D-11 compares the states on a measure of personal income geared more closely to the consumers of public education services—the number of pupils as measured in average daily attendance. Table D-12 shows the relative significance of government activity as it contributes to total personal income, by measuring personal income from government enterprises as a percent of the total. Income from farming activities is compared by state in Table D-13, while Tables D-14 and D-15 contain average household buying incomes and retail sales per household, measures similar to disposable personal income in their approximation of consumer spending power in each state.

## NOTES TO D SERIES TABLES

NEA Research estimates for selected variables within the D Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

# GOVERNMENTAL REVENUE

Revenue of state and local governments, principally revenue generated through taxation, is the subject of tables in the E Series. These tables contain comparative information about the amounts and significance of selected tax sources by state, providing insight into the financial resources of government that are available for financing public education.

General revenue, own-source revenue, and tax collections are presented for state and local governments. Revenue data are expressed on a per resident basis, or as proportions of state personal income. The latter expression, found in Tables E-3, E-5, E-9, E-12, E-15, and E-16, indicates that for every $1,000 of personal income in a state, a certain amount of revenue (sales tax revenue, e.g.) is generated. This is referred to as the "tax effort" of government units, and also can be computed for expenditure categories, as shown in Series G and H.

Tables E-13 through E-16 feature state revenue from general sales and from individual income taxes, expressed on a per capita basis and per $1,000 of state personal income. Please note that low amounts appear for several states, indicating that those taxes are restricted in some fashion, such as the income tax on individuals in New Hampshire. Please consult references on state tax characteristics for clarifying information.

# SCHOOL REVENUE

F Series Tables compare states on their sources of public school revenue. Funds received by public school districts from federal, state, and from local sources are listed for each state, and are expressed in relation to the number of pupils in each state, to the state's personal income, and according to the percentage distribution across the three government sources.

The tables that follow examine the states' relative positions with regard to school revenues per $1,000 of state personal income (F-3, F-4). These measures, as with the examples in the E Series, make it easier to compare the effort of government units to provide financial support for public school programs through measurement of that support with the common denominator of personal income.

Please note that the school revenue data contained in F Series tables update those featured in *Estimates of School Statistics, 1986-87*, published in April. State education departments have the option of revising their estimated data for inclusion in *Rankings*.

Also, estimated data developed by NEA Research are used in F Series Tables when state education agencies do not provide them. Please note these exceptions in the footnotes following the F Series.

F-1. PUBLIC SCHOOL REVENUE PER PUPIL IN AVERAGE DAILY ATTENDANCE, 1985-86 (REVISED)

| | | |
|---|---|---|
| 1. | ALASKA | $8,871 |

# NOTES TO F SERIES TABLES

NEA Research estimates for selected variables within the F Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | All |
| Arizona | F-1, F-8, F-11 |
| California | All |
| District | F-1, F-2, F-6, F-8, F-10, F-11 |
| Georgia | All |
| Louisiana | F-1, F-2 |

The following state education departments provided additional information to help explain data reported for their states in F Series Tables:

| | |
|---|---|
| Colorado | Revenue data is collected and reported on a calendar year basis, e.g., data for 1985 is actually calendar year 1986 data. |
| Idaho | 1986-87 Revenue figures are estimated as of 6-22-87. They will be finalized during Fall 1987. |
| Indiana | Revenue figures are estimated ones. |
| Louisiana | Adjustment made to 1984-85 to exclude revenue from food service collections. |

# GOVERNMENT EXPENDITURES

State and local government spending characteristics provide useful comparative information about the resources, needs and priorities for public services. Expenditures for government programs vary across states for many reasons, and state-by-state comparisons should be made while keeping them in mind—demographic, economic, and political factors are but a few.

Tables in the G Series describe the spending done by state governments and by state and local governments combined. Expenditure data are expressed on a per capita basis, allowing closer comparison of the differences in levels and objects of state and local government spending, as well as their positions relative to the U.S. average. Use of state personal income in selected tables provides opportunities for comparing the relative "effort" of government units to fund program areas, including public education.

**8-1. PER CAPITA TOTAL GENERAL EXPENDITURES OF STATE GOVERNMENTS FOR ALL FUNCTIONS, 1984-85**

# SCHOOL EXPENDITURES

Expenditures for public education often are compared among states through the use of measures contained in this section. Expenditures for elementary-secondary schools and for higher education can serve as indicators of state and local government "effort" to fund these services. Examples of measures used to compare states on spending for education include current expenditures per pupil in Average Daily Attendance (ADA) or Average Daily Membership (ADM)—two common measurements of education support. In addition, school expenditure data are displayed in relation to state population and state personal income as percentages of total state expenditures, or as proportions of national averages.

Expenditure data are shown for elementary and secondary schools in combination with higher education, and with K-12 spending featured separately. Again, knowledge about public education systems and their funding characteristics is required to make fair comparisons of state-local government financial support of education, relative to that found in other states.

State education agency estimates of elementary-secondary expenditures appear throughout tables in H Series. NEA Research estimates were used when state agency data were not provided. Please note these instances in the footnotes section immediately following the series.

# NOTES TO H SERIES TABLES

NEA Research estimates for selected variables within the H Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | H-9 through H-15 |
| Arizona | H-11 through H-15 |
| District | H-9, H-10, H-14 |
| Georgia | H-9 through H-11 |
| Louisiana | H-9 through H-15 |
| Massachusetts | H-9 through H-15 |
| Nevada | H-9 through H-15 |

The following state education departments provided additional information to help explain data reported for their states in H Series Tables:

| | |
|---|---|
| Colorado | Expenditure data is collected and reported on a calendar year; e.g., data for 1985 is actually calendar year 1986 data. |
| Idaho | 1986-87 Expenditures are estimated figures as of 6-22-87. They will be finalized during Fall 1987. |
| Indiana | Expenditures data are estimated figures. |
| Louisiana | Adjustment made to 1984-85 to include State Department administrative expenditures. Years prior to 1984-85 do not include such expenditures. |
| Ohio | Total expenditures do not include monies for debt retirement. |

# GLOSSARY

AVERAGE DAILY ATTENDANCE: Average of pupils attending when schools are actually in session.

AVERAGE DAILY MEMBERSHIP: An average of the pupils belonging, those present plus those absent, when schools are actually in session.

BASIC ADMINISTRATIVE UNIT: The local school district; the unit for the operation of elementary and secondary schools or for contracting for school services.

CAPITAL OUTLAY: An expenditure that results in the acquisition of fixed assets or additions to fixed assets, which are presumed to have benefits for more than one year. It is an expenditure for land or existing buildings; improvements of grounds; construction of buildings; additions to buildings; remodeling of buildings; initial, additional, and replacement of equipment.

CURRENT EXPENDITURES: All amounts spent at all levels of administration—state, intermediate, and local—for public elementary and secondary day schools for administration, instructional services, plant operation and maintenance, fixed charges, and other school services (attendance, health services, transportation, food services, etc.). Includes the cost of operating the state department of education and the intermediate (county) departments of education; employers' (state, intermediate, and local) contributions to retirement systems and/or social security on behalf of public school employees; and federal, state, and local funds to cover deficits (gross expenditure less sales) of school lunch and milk programs.

DEBT: The major portion of all state and local government debt is long-term indebtedness. A substantial portion of such long-term debt is nonguaranteed debt, i.e., obligations payable solely from pledged earnings of specific activities or facilities, from special assessments, or from specific nonproperty taxes.

EDUCATION: The provision or support of schools and other education facilities and services.

EFFECTIVE BUYING INCOME: Same as disposable personal income; is obtained by deducting from personal income direct personal taxes and certain other nontax payments to government. The personal taxes deducted include federal, state, and local income taxes, estate and gift taxes, and miscellaneous licenses and permits. Property taxes are not deducted.

ENROLLMENT: A cumulative count of the number of different pupils registered during the entire school year. New entrants are added, but those leaving are not subtracted.

EXPENDITURES: All amounts of money paid out by a government—net of recoveries and other correcting transactions—other than for retirement of debt, investment in securities, extension of credit, or as agency transactions. Expenditures includes only external transactions of a government and excludes noncash transactions, such as the provision of perquisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments involved.

FALL ENROLLMENT: The count of the pupils registered in the fall of the school year, usually October.

FIRE PROTECTION: Comprises fire-fighting and fire-protection activities of local governments.

FUNCTIONS: Public purposes served by governmental activities (education, highways, public welfare, etc.). Expenditures for each function includes amounts for all types of expenditures serving the purpose concerned.

GENERAL EXPENDITURE: All expenditures of a government other than utility expenditures, liquor store expenditures, and insurance trust expenditures.

GENERAL REVENUE: All revenue of a government except the kinds of revenue classified as utility revenue, liquor store revenue, and insurance trust revenue. All tax collections, even if designated for insurance trust or local utility purposes, are classified under general revenue.

GENERAL SALES TAXES: Sales or gross receipts taxes which are applicable, with only specified exceptions, to all types of goods and services, or all gross income, whether at a single or at classified rates.

HEALTH: Health services, other than hospital care, including health research, clinics, nursing, immunization, and other categorical, environmental, and general public health activities. School health services provided by health agencies (rather than school agency) are included.

HIGHWAYS: Streets, highways, and structures necessary for their use; street lighting; snow and ice removal; toll highway and bridge facilities; and ferries.

HIGHER EDUCATION: Includes facilities and activities of all education institutions beyond the high school level operated by state or local governments, except that agricultural experiment stations and agricultural extension services are classified under natural resources, and university-operated hospitals serving the public are classed under hospitals. These education categories include related services such as pupil transportation, school milk and lunch programs, cafeterias, health and recreational programs, and the like. Revenue and expenditures for school lunch services, dormitories, athletic events, and other auxiliary services are included on a gross basis.

HOSPITALS: Establishment and operation of hospital facilities, provision of hospital care, and support of other public or private hospitals.

HOUSEHOLD: A unit that includes all persons occupying a house, apartment, or room regarded as a dwelling unit, excluding group quarters such as dormitories.

INDIVIDUAL INCOME TAX: Taxes on individuals measured by net income, and taxes imposed on special types of income (e.g., interest, dividends, and income from intangibles).

INSTRUCTIONAL STAFF: Number of positions, not the number of different individuals occupying the positions during the school year. In local schools includes all public elementary and secondary (junior and senior high) day school positions (or full-time equivalents) that are in the nature of teaching or in the improvement of the teaching-learning situation. Includes consultants or supervisors of instruction, principals, teachers, guidance personnel, librarians, psychological personnel, and other instructional staff. Excludes attendance personnel, health services personnel, clerical personnel, and junior college staff. In institutions of higher education includes those engaged in teaching and related academic research in junior colleges, colleges, and universities, including those in hospitals, agricultural experiment stations and farms.

INTEREST ON DEBT: Annual expenditures to pay interest only on long-term debt.

LIVE BIRTHS: Number of births in the U.S.

NONINSTRUCTIONAL STAFF: In local schools includes administrative and clerical personnel; plant operation and maintenance employees; bus drivers; lunchroom, health, and recreational personnel engaged by school systems. In institutions of higher education includes cafeteria workers, clerical and custodial workers in colleges and universities, hospitals, agricultural experiment stations, and farms.

PERSONAL INCOME: State personal income is the current income received by residents of the states from all sources, including transfers from government and business, but excluding transfers among persons. It is a before-tax measure. The total includes nonmonetary income or income received in kind. The figures include income of individuals and also income of nonprofit institutions; private trust funds; and private pension, health, and welfare funds.

POLICE PROTECTION: Preservation of law and order and traffic safety. Includes highway police patrols, crime prevention activities, police communications, detention and custody of persons awaiting trial, traffic safety, vehicular inspection, and the like.

PROPERTY TAXES: Taxes conditioned on ownership of property and measured by its value. Includes both general property taxes (i.e., relating to property as a whole, real and personal, tangible or intangible, whether taxed at a single rate or at classified rates) and special property taxes (i.e., on selected types of property, such as motor vehicles or certain or all tangibles, subject to rates that are not directly related to rates applying for general property taxation).

PUBLIC WELFARE: Support of and assistance to eligible persons contingent upon their need. Excludes pensions to former employees and other benefits not contingent on need. Expenditures under this heading include cash assistance payments directly to needy persons under categorical and other welfare programs; vendor payments made directly to private purveyors for medical care, burials, and other services provided under welfare programs; welfare institutions; and any intergovernmental or other direct expenditures for welfare purposes. Any services provided directly by the government through its hospital and health agencies are classed under those headings.

RESIDENT POPULATION: In addition to those who are residents of an area, the figure also includes armed forces personnel who are stationed in the area.

REVENUE: Revenue receipts for public school purposes from LOCAL, intermediate and other sources include all funds for direct expenditures by local and intermediate districts for school services, for the operation of intermediate departments of education,

for employer contributions to retirement systems and/or social security on behalf of public school employees, for the purchase of materials for distribution of local school districts, etc. Includes net receipts from revolving funds or clearing accounts only when such funds are available for general expenditure by the local board of education. Includes gifts and tuition and fees received from patrons.

Revenue receipts from STATE sources include all funds for the operation of the state department of education, for state (employer) contributions to retirement systems and/or social security on behalf of school employees, for grants in aid to intermediate and local school districts for school purposes (including funds available from state bond issues for such grants and the costs of textbooks, buses, supplies, etc., purchased by the state for distribution to local school districts), for the payment of interest on state bonds issued to provide grants to local school districts, and all other state revenue for public school purposes. Money collected by the state as an agent of a lesser unit and turned over in like amounts to that unit is not included.

Revenue receipts from FEDERAL sources include money distributed from the federal treasury either directly to local school districts or through the state and county, including grants for vocational education, for aid to federally affected areas, for National Defense Education Act programs, for school lunch and milk programs, for educating Indians in local public schools, and money derived from federal forest reserves and federal oil royalties. (No special effort is made to include amount of grants in kind, for example, operation of the school lunch program).

REVENUE FROM OWN SOURCES: All revenue of a government (taxes and other) except intergovernmental.

SCHOOL-AGE POPULATION: Population age 5 through 17, inclusive (excluding armed forces abroad).

TAXES: Compulsory contributions exacted by a government for public purposes, except employee and employer assessments for retirement and social insurance purposes, which are classed as insurance trust revenue. All tax revenue is classified under general revenue and comprises amounts received (including interest and penalties but excluding refunds) from taxes imposed by the recipient government. Amounts received by a government from a tax it imposes are counted as tax revenue of that government, even though initially collected by another government; however, any amounts retained are treated as tax revenue of the collecting government. Tax amounts subsequently distributed to other governments are classified as intergovernmental transactions.

TOTAL REVENUE RECEIPTS: Includes all revenue receipts available for expenditure for current expenses, capital outlay, and debt service for public schools, including all appropriations from general funds of federal, state, county, and local governments; receipts from taxes levied for school purposes; income from permanent school funds and endowments; income from leases of school lands; interest on bank deposits; tuition; gifts; etc. Amounts that increase the school indebtedness or that represent exchange of school property for money are excluded.

# INDEX TO TABLES

# FOREWORD

Interest in education improvement and renewal which heightened during the early 1980s continues to capture the attention of researchers, policymakers, and the public. While much has been done to enhance public education programs and services, much work and many challenges remain. In this setting, NEA Research offers *Rankings of the States, 1988* to its state and local affiliates as a tool for use throughout this period of public school reform.

*Rankings of the States* provides state-level data on an array of topics relevant to the complex enterprise of public education. State-by-state figures on government and school financing, state demographics, and public school personnel permit a statistical assessment of the scope of public education and an identification of emerging trends in key areas.

The *Rankings* report enjoys a long history of use by affiliates of the NEA as well as by planners and policymakers in other organizations. It has, since the 1960s, presented facts and figures useful in determining where states vary from one another or from national averages on selected statistics, and explanations as to how the reported data reflect social and economic characteristics and changes. Of course, no one table or set of them can tell the entire story of a state's education offerings. One must consider a state's tax system, its provision of other public services, the characteristics of its population, and more. It is therefore unwise to draw conclusions solely from the tables in this report, and the reader is urged to supplement these rank-ordered data with specific information about state and local activities and services related to public education.

State department of education staff who contributed to this report deserve much credit for the current public school data it presents, as do the state education associations across the country.

*NEA Research*

*September 1988*

# TECHNICAL NOTES

*Rankings of the States, 1988* contains rank-ordered statistics for the fifty states and the District of Columbia. All state data are ranked beginning with the largest figure. When the values of two or more states are the same, they are assigned the same rank, with the appropriate number resumed with the next state in rank.

Please note that *Rankings of the States, 1988* features revised figures for some public school data previously published in *Estimates of School Statistics, 1987-88*, another report of NEA Research published in April 1988. State education agencies were invited to review their fall 1987 estimates and revise them for inclusion in this report. For this reason, estimated data in B, C, F, and H Series may differ from those in *Estimates of School Statistics*.

When necessary, NEA Research develops estimated data for tables appearing in Series B, C, F, and H Tables. Please note these instances in the pages immediately following the Series.

As it has been noted on previous occasions, the availability of data from federal government and other sources dictates the presence or absence of certain tables in this report. Statistics for full-time employment in higher education in 1986 presented in the C Series have been computed by the Bureau of the Census with a formula using hours worked by part-time employees. A payroll based formula was used prior to the 1985 survey. Because of this change, full-time equivalent employment statistics were excluded from the 1985 Census report and from the *Rankings* 1987 report (the *Rankings* carried a reprint of the 1984 data).

Please note that tables featuring Average Daily Membership (ADM) do not contain values for the U.S. as a whole since six states do not compute or provide estimates for their statewide ADM. Consequently, averages are not computed in those cases—this fact is reflected by an "NA" notation. Tables involving ADM data are B-5, B-6, H-14, and H-15.

Tables D-14 and D-15 feature data from the *Sales and Marketing Management Survey of Buying Power*, a copyrighted work. Reproduction of these tables is prohibited unless permission is obtained directly from Sales and Marketing Management, 633 Third Avenue, New York, New York, 10017.

# POPULATION

Tables in the A Series provide information about the population of states and can serve as indicators of the relative demand for public education services or other public programs.

The level and change in total state population are featured in Tables A-1 through A-4. These tables help to identify patterns of growth or decline for each state and the resulting implications for staffing and financing public education institutions. Population density is computed in Table A-12, while the number of births by state is the focus of A-10 and A-11.

School-age population data in Tables A-5 and A-6 focus directly on the consumers of public elementary and secondary education. Combining these figures with public school enrollment tables in B Series can indicate demand for and participation in public school services.

Tables A-7 through A-9 define the adult population within states. Changes in the size of adult and elderly age groups affect demand for public school programs and the degree to which funding for education faces competition from other public sector programs. These tables also can indicate the willingness of citizens within a state to support public education.

Bureau of the Census, *Statistical Abstract of the United States, 1988, p. 19.*

## ENROLLMENT, ATTENDANCE, AND MEMBERSHIP

Tables in the B Series feature data on student participation in public elementary and secondary schools. The tables include current statistics on pupils enrolled, and the change in enrollment over the previous year and over a decade. These tables enable assessments of the states which can expect to experience increasing demand for public school services and staff.

Alternative measures of public school participation also are included in this Series. Average Daily Attendance (ADA) and Average Daily Membership (ADM) are presented in Tables B-4 through B-7, and differ from fall enrollment counts in that they present averages of pupil participation *year round*. Departments of education in six states do not provide data for ADM, and these instances are identified as "NA" in Tables B-5 and B-6, and throughout other Series as appropriate. Also, there are no U.S. totals or computed averages using ADM, as national figures for this measure cannot be considered to represent totals or averages for all states.

Table B-8 shows the percent change in the number of high school graduates over a five-year period, useful in predicting demand for higher education services in future years.

Footnotes to the B Series tables note the instances where the NEA has had to formulate estimates of public school statistics, in the absence of estimated data from state education departments.

## NOTES TO B SERIES TABLES

NEA Research estimates for selected variables within the B Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | B-4, B-6, B-7, B-8 |
| Georgia | All |
| Indiana | B-4 through B-8 |
| Massachusetts | All |
| Michigan | B-2 through B-8 |
| Nebraska | B-4 through B-8 |
| Nevada | B-2 through B-8 |

The following state education departments provided additional information to help explain data reported for their states in B Series Tables:

| | |
|---|---|
| Arizona | ADM and ADA data are reported with kindergarten at full count. In the past, ADM and ADA have been reported with kindergarten at half count |
| Indiana | Some of Indiana's prekindergarten students are taught by federally funded teachers; however, they are included in the elementary total. |

# FACULTY

Personnel in local public schools and in public institutions of higher education are the focus of tables in the C Series. Changes in the number of staff employed in education institutions as well as their levels of compensation reflect trends in enrollment, economic trends, and in the program priorities expressed by state residents.

The number of staff employed in public schools is featured in Table C-1. Please note that statistics for full-time employment in public higher education, Tables C-2 through C-4, are for the year 1986. Statistics for 1985 were excluded from the Bureau of the Census 1985 report due to a delay caused by a change in the computation formula. The 1987 issue of the *Rankings* carried a reprint of the 1984 tables instead. The statistics presented in Tables C-2 through C-4 have been computed by the Census with a formula using hours worked by part-time employees. A payroll based formula was used prior to the 1985 Census survey. Three tables of pupil load—pupils enrolled per teacher, pupils in ADA per teacher, and pupils in ADM per teacher—are presented in Tables C-5 through C-7.

Average salaries of public classroom teachers and total instructional staff are featured in C-9 through C-22. These average salary data are presented in "current" or unadjusted dollars, and also in "constant" or inflation-adjusted dollars. These computations employ the Consumer Price Index for all Urban Consumers (CPI-U), converted to a school-year basis, using the 1977-78 school year as the base (1977-78=100.0).

The presentation of salary changes in constant-dollar terms enables identification of salary increases attributable to inflation. The resulting picture for most states is a salary gain over the past decade far below what the public may intend or know of. As an advocacy tool, the use of these salary data can do much to dispel myths of huge jumps in the purchasing power of teacher salaries.

Footnotes to C Series tables appear at the end of this section. These notes identify instances where NEA-estimated data appear in lieu of estimates from state education agencies.

# NOTES TO C SERIES TABLES

NEA Research estimates for selected variables within the C Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | C-6 |
| District | C-8 |
| Florida | C-16 through C-22 |
| Georgia | All |
| Indiana | C-1, C-5 through C-8, C-11 through C-15, C-18 through C-22 |
| Kansas | C-8 |
| Massachusetts | All |
| Michigan | C-8 through C-22 |
| Mississippi | C-5 through C-8, C-11 through C-15, C-18 through C-22 |
| Nebraska | C-11 through C-15, C-18 through C-22 |
| Nevada | C-5, C-7 |
| Vermont | C-5 through C-22 |

The following state education departments provided additional information to help explain data reported for their states in C Series Tables:

| | |
|---|---|
| Ohio | Average salary for 1986-87 includes supplemental pay; 1987-88 does not |
| Oregon | Salaries include a 6 percent pickup of employee portion of retirement contribution by employer. |

## GENERAL FINANCIAL RESOURCES

Personal income measures the overall economic activity within a specific geographic area. State personal income is defined as the aggregate or total income from *all* sources received by persons residing in a state, and it has a significant effect on the total income or financial resources available to governmental jurisdictions through taxation. This, in turn, affects the prospects for financing public education and other services. Indeed, state personal income is used throughout the tables in this report to gauge the ability and effort of states to generate funds for public programs, and it is considered by some to present a better method of comparison than the use of state population data for per capita computations.

Tables D-1 and D-2 compare states on their total personal income and the percentage gain in each state. Per capita personal income is featured in Tables D-3 through D-6, providing more detail about the relative financial well-being of individuals within each state through the use of statewide population as a common denominator.

*Disposable personal income* represents the personal income of residents *minus* taxes and other required payments, such as fines, penalties, and fees. Disposable personal income reflects the amount of income remaining for expenditure on consumer goods, for example, and represents a different measure of "wealth" among states. Tables D-8 through D-10 feature *per capita* disposable personal income, or the amount of personal income for every person in each state, thereby providing some comparability across states for this measure.

Table D-11 compares the states on a measure of personal income geared more closely to the consumers of public education services—the number of pupils as measured in average daily attendance. Table D-12 shows the relative significance of government activity as it contributes to total personal income, by measuring personal income from government and government enterprises as a percent of the total. Income from farming activities is compared by state in Table D-13, while Tables D-14 and D-15 contain average household buying incomes and retail sales per household, measures similar to disposable personal income in their approximation of consumer spending power in each state.

# GOVERNMENTAL REVENUE

Revenue of state and local governments, principally revenue generated through taxation, is the subject of tables in the E Series. These tables contain comparative information about the amounts and significance of selected tax sources by state, providing insight into the financial resources of government that are available for financing public education.

General revenue, own-source revenue, and tax collections are presented for state and local governments. Revenue data are expressed on a per resident basis, or as proportions of state personal income. The latter expression, found in Tables E-3, E-5, E-9, E-12, E-15, and E-16, indicates that for every $1,000 of personal income in a state, a certain amount of revenue (sales tax revenue, e.g.) is generated. This is referred to as the "tax effort" of government units, and also can be computed for expenditure categories, as shown in Series G and H.

Tables E-13 through E-16 feature state revenue from general sales and from individual income taxes, expressed on a per capita basis and per $1,000 of state personal income. Please note that low amounts appear for several states, indicating that those taxes are restricted in some fashion, such as the income tax on individuals in New Hampshire. Please consult references on state tax characteristics for clarifying information.

# SCHOOL REVENUE

F Series Tables compare states on their sources of public school revenue. Funds received by public school districts from federal, state, and from local sources are listed for each state, and are expressed in relation to the number of pupils in each state, to the state's personal income, and according to the percentage distribution across the three government sources.

The tables that follow examine the states' relative positions with regard to school revenues per $1,000 of state personal income (F-3, F-4). These measures, as with the examples in the E Series, make it easier to compare the effort of government units to provide financial support for public school programs through measurement of that support with the common denominator of personal income.

Please note that the school revenue data contained in F Series tables update those featured in *Estimates of School Statistics, 1987-88*, published in April. State education departments have the option of revising their estimated data for inclusion in *Rankings*.

Also, estimated data developed by NEA Research are used in F Series Tables when state education agencies do not provide them. Please note these exceptions in the footnotes following the F Series.

# NOTES TO F SERIES TABLES

NEA Research estimates for selected variables within the F Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | F-1, F-2 |
| Arizona | F-2, F-6, F-8, F-10, F-11 |
| Georgia | All |
| Illinois | F-10 |
| Indiana | F-1, F-2, F-5 through F-11 |
| Iowa | F-2, F-6, F-8, F-10, F-11 |
| Massachusetts | All |
| Michigan | F-6, F-8, F-10, F-11 |
| Mississippi | F-2, F-6, F-8, F-10, F-11 |
| Nebraska | F-2, F-6, F-8, F-10, F-11 |
| Nevada | F-2 |
| North Carolina | F-2, F-6, F-8, F-10, F-11 |

The following state education departments provided additional information to help explain data reported for their states in F Series Tables:

California — Local revenues to support schools are determined by the state legislature and governor. Boards of education have no authority to raise revenues for their district.

Colorado — Public school revenues are collected and reported on a calendar-year basis.

Ohio — The 1986-87 and 1987-88 local and nonrevenue receipts do not include capital outlay and other non-operational funds that were included prior to 1986-87.

1293

# GOVERNMENT EXPENDITURES

State and local government spending characteristics provide useful comparative information about the resources, needs and priorities for public services. Expenditures for government programs vary across states for many reasons, and state-by-state comparisons should be made while keeping them in mind—demographic, economic, and political factors are but a few.

Tables in the G Series describe the spending done by state governments and by state and local governments combined. Expenditure data are expressed on a per capita basis, allowing closer comparison of the differences in levels and objects of state and local government spending, as well as their positions relative to the U.S. average. Use of state personal income in selected tables provides opportunities for comparing the relative "effort" of government units to fund program areas, including public education.

# SCHOOL EXPENDITURES

Expenditures for public education often are compared among states through the use of measures contained in this section. Expenditures for elementary-secondary schools and for higher education can serve as indicators of state and local government "effort" to fund these services. Examples of measures used to compare states on spending for education include current expenditures per pupil in Average Daily Attendance (ADA) or Average Daily Membership (ADM)—two common measurements of education support. In addition, school expenditure data are displayed in relation to state population and state personal income as percentages of total state expenditures, or as proportions of national averages.

Expenditure data are shown for elementary and secondary schools in combination with higher education, and with K-12 spending featured separately. Again, knowledge about public education systems and their funding characteristics is required to make fair comparisons of state-local government financial support of education, relative to that found in other states.

State education agency estimates of elementary-secondary expenditures appear throughout tables in H Series. NEA Research estimates were used when state agency data were not provided. Please note these instances in the footnotes section immediately following the series.

# NOTES TO H SERIES TABLES

NEA Research estimates for selected variables within the H Series are identified below by state and by table number. NEA estimates appear in those cases where state education departments did not respond to requests by NEA Research for estimates of school statistics.

| | |
|---|---|
| Alaska | H-9 through H-15 |
| District | H-9, H-10, H-14 |
| Georgia | H-9 through H-11 |
| Illinois | H-11, H-12, H-15 |
| Indiana | H-9 through H-15 |
| Iowa | H-11, H-12, H-15 |
| Massachusetts | H-9 through H-15 |
| Michigan | H-9 through H-15 |
| Mississippi | H-11, H-12, H-15 |
| Nebraska | H-11, H-12, H-15 |
| Nevada | H-11, H-12, H-15 |
| North Carolina | H-9, H-10, H-14 |
| Utah | H-9 through H-15 |
| West Virginia | H-11, H-12, H-15 |

The following state education departments provided additional information to help explain data reported for their states in H Series Tables:

Colorado — Public school expenditures are collected and reported on a calendar-year basis.

Michigan — Expenditures for administration by the state board of education and the state department of education are not included in the expenditure figures.

Ohio — Total current expenditures prior to 1986-87 include some non-operational expenditures, and post-secondary expenditures. The 1986-87 and 1987-88 data include operational expenditures for grades K-12 only.

# GLOSSARY

AVERAGE DAILY ATTENDANCE: Average of pupils attending when schools are actually in session.

AVERAGE DAILY MEMBERSHIP: An average of the pupils belonging, those present plus those absent, when schools are actually in session.

BASIC ADMINISTRATIVE UNIT: The local school district; the unit for the operation of elementary and secondary schools or for contracting for school services.

CAPITAL OUTLAY: An expenditure that results in the acquisition of fixed assets or additions to fixed assets, which are presumed to have benefits for more than one year. It is an expenditure for land or existing buildings; improvements of grounds; construction of buildings; additions to buildings; remodeling of buildings; initial, additional, and replacement of equipment.

CURRENT EXPENDITURES: All amounts spent at all levels of administration—state, intermediate, and local—for public elementary and secondary day schools for administration, instructional services, plant operation and maintenance, fixed charges, and other school services (attendance, health services, transportation, food services, etc.). Includes the cost of operating the state department of education and the intermediate (county) departments of education; employers' (state, intermediate, and local) contributions to retirement systems and/or social security on behalf of public school employees; and federal, state, and local funds to cover deficits (gross expenditure less sales) of school lunch and milk programs.

DEBT: The major portion of all state and local government debt is long-term indebtedness. A substantial portion of such long-term debt is nonguaranteed debt, i.e., obligations payable solely from pledged earnings of specific activities or facilities, from special assessments, or from specific nonproperty taxes.

EDUCATION: The provision or support of schools and other education facilities and services.

EFFECTIVE BUYING INCOME: Same as disposable personal income; is obtained by deducting from personal income direct personal taxes and certain other nontax payments to government. The personal taxes deducted include federal, state, and local income taxes, estate and gift taxes, and miscellaneous licenses and permits. Property taxes are not deducted.

ENROLLMENT: A cumulative count of the number of different pupils registered during the entire school year. New entrants are added, but those leaving are not subtracted.

EXPENDITURES: All amounts of money paid out by a government—net of recoveries and other correcting transactions—other than for retirement of debt, investment in securities, extension of credit, or as agency transactions. Expenditures includes only external transactions of a government and excludes noncash transactions, such as the provision of perquisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments involved.

FALL ENROLLMENT: The count of the pupils registered in the fall of the school year, usually October.

FIRE PROTECTION: Comprises fire-fighting and fire-protection activities of local governments.

FUNCTIONS: Public purposes served by governmental activities (education, highways, public welfare, etc.). Expenditures for each function includes amounts for all types of expenditures serving the purpose concerned.

GENERAL EXPENDITURE: All expenditures of a government other than utility expenditures, liquor store expenditures, and insurance trust expenditures.

GENERAL REVENUE: All revenue of a government except the kinds of revenue classified as utility revenue, liquor store revenue, and insurance trust revenue. All tax collections, even if designated for insurance trust or local utility purposes, are classified under general revenue.

GENERAL SALES TAXES: Sales or gross receipts taxes which are applicable, with only specified exceptions, to all types of goods and services, or all gross income, whether at a single or at classified rates.

HEALTH: Health services, other than hospital care, including health research, clinics, nursing, immunization, and other categorical, environmental, and general public health activities. School health services provided by health agencies (rather than school agency) are included.

1307

HIGHWAYS: Streets, highways, and structures necessary for their use; street lighting; snow and ice removal; toll highway and bridge facilities; and ferries.

HIGHER EDUCATION: Includes facilities and activities of all education institutions beyond the high school level operated by state or local governments, except that agricultural experiment stations and agricultural extension services are classified under natural resources, and university-operated hospitals serving the public are classed under hospitals. These education categories include related services such as pupil transportation, school milk and lunch programs, cafeterias, health and recreational programs, and the like. Revenue and expenditures for school lunch services, dormitories, athletic events, and other auxiliary services are included on a gross basis.

HOSPITALS: Establishment and operation of hospital facilities, provision of hospital care, and support of other public or private hospitals.

HOUSEHOLD: A unit that includes all persons occupying a house, apartment, or room regarded as a dwelling unit, excluding group quarters such as dormitories.

INDIVIDUAL INCOME TAX: Taxes on individuals measured by net income, and taxes imposed on special types of income (e.g., interest, dividends, and income from intangibles).

INSTRUCTIONAL STAFF: Number of positions, not the number of different individuals occupying the positions during the school year. In local schools includes all public elementary and secondary (junior and senior high) day school positions (or full-time equivalents) that are in the nature of teaching or in the improvement of the teaching-learning situation. Includes consultants or supervisors of instruction, principals, teachers, guidance personnel, librarians, psychological personnel, and other instructional staff. Excludes attendance personnel, health services personnel, clerical personnel, and junior college staff. In institutions of higher education includes those engaged in teaching and related academic research in junior colleges, colleges, and universities, including those in hospitals, agricultural experiment stations and farms.

INTEREST ON DEBT: Annual expenditures to pay interest only on long-term debt.

LIVE BIRTHS: Number of births in the U.S.

NONINSTRUCTIONAL STAFF: In local schools includes administrative and clerical personnel; plant operation and maintenance employees; bus drivers; lunchroom, health, and recreational personnel engaged by school systems. In institutions of higher education includes cafeteria workers, clerical and custodial workers in colleges and universities, hospitals, agricultural experiment stations, and farms.

PERSONAL INCOME: State personal income is the current income received by residents of the states from all sources, including transfers from government and business, but excluding transfers among persons. It is a before-tax measure. The total includes nonmonetary income or income received in kind. The figures include income of individuals and also income of nonprofit institutions; private trust funds; and private pension, health, and welfare funds.

POLICE PROTECTION: Preservation of law and order and traffic safety. Includes highway police patrols, crime prevention activities, police communications, detention and custody of persons awaiting trial, traffic safety, vehicular inspection, and the like.

PROPERTY TAXES: Taxes conditioned on ownership of property and measured by its value. Includes both general property taxes (i.e., relating to property as a whole, real and personal, tangible or intangible, whether taxed at a single rate or at classified rates) and special property taxes (i.e., on selected types of property, such as motor vehicles or certain or all tangibles, subject to rates that are not directly related to rates applying for general property taxation).

PUBLIC WELFARE: Support of and assistance to eligible persons contingent upon their need. Excludes pensions to former employees and other benefits not contingent on need. Expenditures under this heading include cash assistance payments directly to needy persons under categorical and other welfare programs; vendor payments made directly to private purveyors for medical care, burials, and other services provided under welfare programs; welfare institutions; and any intergovernmental or other direct expenditures for welfare purposes. Any services provided directly by the government through its hospital and health agencies are classed under those headings.

RESIDENT POPULATION: In addition to those who are residents of an area, the figure also includes armed forces personnel who are stationed in the area.

REVENUE: Revenue receipts for public school purposes from LOCAL, intermediate and other sources include all funds for direct expenditures by local and intermediate districts for school services, for the operation of intermediate departments of education,

1308

for employer contributions to retirement systems and/or social security on behalf of public school employees, for the purchase of materials for distribution of local school districts, etc. Includes net receipts from revolving funds or clearing accounts only when such funds are available for general expenditure by the local board of education. Includes gifts and tuition and fees received from patrons.

Revenue receipts from STATE sources include all funds for the operation of the state department of education, for state (employer) contributions to retirement systems and/or social security on behalf of school employees, for grants in aid to intermediate and local school districts for school purposes (including funds available from state bond issues for such grants and the costs of textbooks, buses, supplies, etc., purchased by the state for distribution to local school districts), for the payment of interest on state bonds issued to provide grants to local school districts, and all other state revenue for public school purposes. Money collected by the state as an agent of a lesser unit and turned over in like amounts to that unit is not included.

Revenue receipts from FEDERAL sources include money distributed from the federal treasury either directly to local school districts or through the state and county, including grants for vocational education, for aid to federally affected areas, for National Defense Education Act programs, for school lunch and milk programs, for educating Indians in local public schools, and money derived from federal forest reserves and federal oil royalties. (No special effort is made to include amount of grants in kind, for example, operation of the school lunch program).

REVENUE FROM OWN SOURCES: All revenue of a government (taxes and other) except intergovernmental.

SCHOOL-AGE POPULATION: Population age 5 through 17, inclusive (excluding armed forces abroad).

TAXES: Compulsory contributions exacted by a government for public purposes, except employee and employer assessments for retirement and social insurance purposes, which are classed as insurance trust revenue. All tax revenue is classified under general revenue and comprises amounts received (including interest and penalties but excluding refunds) from taxes imposed by the recipient government. Amounts received by a government from a tax it imposes are counted as tax revenue of that government, even though initially collected by another government; however, any amounts retained are treated as tax revenue of the collecting government. Tax amounts subsequently distributed to other governments are classified as intergovernmental transactions.

TOTAL REVENUE RECEIPTS: Includes all revenue receipts available for expenditure for current expenses, capital outlay, and debt service for public schools, including all appropriations from general funds of federal, state, county, and local governments; receipts from taxes levied for school purposes; income from permanent school funds and endowments; income from leases of school lands; interest on bank deposits; tuition; gifts; etc. Amounts that increase the school indebtedness or that represent exchange of school property for money are excluded.

# FOREWORD

Interest in education improvement and renewal, which heightened during the early 1980s, continues to capture the attention of researchers, policymakers, and the public. While much has been done to enhance public education programs and services, much work and many challenges remain. In this setting, NEA Research offers *Rankings of the States, 1989* to its state and local affiliates as a tool for use throughout this period of public school reform.

*Rankings of the States* provides state-level data on an array of topics relevant to the complex enterprise of public education. State-by-state figures on government and school financing, state demographics, and public school personnel permit a statistical assessment of the scope of public education and an identification of emerging trends in key areas.

The *Rankings* report enjoys a long history of use by affiliates of the NEA as well as by planners and policymakers in other organizations. It has, since the 1960s, presented facts and figures useful in determining where states vary from one another or from national averages on selected statistics, and explanations as to how the reported data reflect social and economic characteristics and changes. Of course, no one table or set of tables can tell the entire story of a state's education offerings. One must consider a state's tax system, its provision of other public services, the characteristics of its population, and more. It is therefore unwise to draw conclusions solely from the tables in this report, and the reader is urged to supplement these rank-ordered data with specific information about state and local activities and services related to public education.

State department of education staff who contributed to this report deserve much credit for the current public school data it presents, as do the state education associations across the country.

*NEA Research*

*September 1989*

# TECHNICAL NOTES

*Rankings of the States, 1989* contains rank-ordered statistics for the fifty states and the District of Columbia. All state data are ranked beginning with the largest figure. When the values of two or more states are the same, they are assigned the same rank, with the appropriate number resumed with the next state in rank.

The education data in *Rankings* are the most recent actual or estimated data available from state departments of education. Where no data are available from a state education department, NEA Research has provided an estimate which is identified by an asterisk in Series B, C, F, and H Tables.

The Notes to Series Tables have been consolidated in a single section and modified to contain only additional information provided by state education departments to help explain data reported for their states. (See page 53.)

*Rankings of the States, 1989* features revised figures for some public school data previously published in *Estimates of School Statistics, 1988-89,* another report of NEA Research published in April 1989. State education agencies were invited to review their fall 1988 estimates and revise them for inclusion in this report. For this reason, data in B, C, F, and H Series may differ from those in *Estimates of School Statistics.*

As it has been noted on previous occasions, the availability of data from federal government and other sources dictates the presence or absence of certain tables in this report. For the second time, statistics for full-time employment in higher education in 1987 presented in the C Series have been computed by the Bureau of the Census with a formula using hours worked by part-time employees. A payroll based formula was used prior to the 1985 survey.

Please note that tables featuring Average Daily Membership (ADM) do not contain values for the U.S. as a whole since six states do not compute or provide estimates for their statewide ADM. Consequently, averages are not computed in those cases—this fact is reflected by an "NA" notation. Tables involving ADM data are B-5, B-6, H-14, and H-15.

Tables D-14 and D-15 feature data from the *Sales and Marketing Management Survey of Buying Power*, a copyrighted work. Reproduction of these tables is prohibited unless permission is obtained directly from Sales and Marketing Management, 633 Third Avenue, New York, New York, 10017.

# POPULATION

Tables in the A Series provide information about the population of states and can serve as indicators of the relative demand for public education services or other public programs.

The level and change in total state population are featured in Tables A-1 through A-4. These tables help to identify patterns of growth or decline for each state and the resulting implications for staffing and financing public education institutions. Population density is computed in Table A-12, while the number of births by state is the focus of A-10 and A-11.

School-age population data in Tables A-5 and A-6 focus directly on the consumers of public elementary and secondary education. Combining these figures with public school enrollment tables in B Series can indicate demand for and participation in public school services.

Tables A-7 through A-9 define the adult population within states. Changes in the size of adult and elderly age groups affect demand for public school programs and the degree to which funding for education faces competition from other public sector programs. These tables also can indicate the willingness of citizens within a state to support public education.

# ENROLLMENT, ATTENDANCE, AND MEMBERSHIP

Tables in the B Series feature data on student participation in public elementary and secondary schools. The tables include current statistics on pupils enrolled, and the change in enrollment over the previous year and over a decade. These tables enable assessments of the states which can expect to experience increasing demand for public school services and staff.

Alternative measures of public school participation also are included in this Series. Average Daily Attendance (ADA) and Average Daily Membership (ADM) are presented in Tables B-4 through B-7, and differ from fall enrollment counts in that they present averages of pupil participation *year round.* Departments of education in six states do not provide data for ADM, and these instances are identified as "NA" in Tables B-5 and B-6, and throughout other Series as appropriate. Also, there are no U.S. totals or computed averages using ADM, as national figures for this measure cannot be considered to represent totals or averages for all states.

Table B-8 shows the percent change in the number of high school graduates over a five-year period, useful in predicting demand for higher education services in future years.

Please see page 53 for additional information provided by the state education departments to help explain data reported for their states in B Series Tables.

# FACULTY

Personnel in local public schools and in public institutions of higher education are the focus of tables in the C Series. Changes in the number of staff employed in education institutions as well as their levels of compensation reflect trends in enrollment, economy, and program priorities expressed by state residents.

The number of staff employed in public schools is featured in Table C-1. The statistics for full-time employment in higher education presented in Tables C-2 through C-4 have been computed by the Census with a formula using hours worked by part-time employees. A payroll based formula was used prior to the 1985 Census survey. Three tables of pupil load—pupils enrolled per teacher, pupils in ADA per teacher, and pupils in ADM per teacher—are presented in Tables C-5 through C-7.

Average salaries of public classroom teachers and total instructional staff are featured in C-9 through C-22. These average salary data are presented in "current" or unadjusted dollars, and also in "constant" or inflation-adjusted dollars. These computations employ the Consumer Price Index for all Urban Consumers (CPI-U), converted to a school-year basis, using the 1978-79 school year as the base (1978-79 = 100.0).

The presentation of salary changes in constant-dollar terms enables identification of salary increases attributable to inflation. The resulting picture for most states is a salary gain over the past decade far below what the public may intend or know of. As an advocacy tool, the use of these salary data can do much to dispel myths of huge jumps in the purchasing power of teacher salaries.

Please see page 53 for additional information provided by the state education departments to help explain data reported for their states in C Series Tables.

## GENERAL FINANCIAL RESOURCES

Personal income measures the overall economic activity within a specific geographic area. State personal income is defined as the aggregate or total income from *all* sources received by persons residing in a state, and it has a significant effect on the total income or financial resources available to governmental jurisdictions through taxation. This, in turn, affects the prospects for financing public education and other services. Indeed, state personal income is used throughout the tables in this report to gauge the ability and effort of states to generate funds for public programs, and it is considered by some to present a better method of comparison than the use of state population data for per capita computations.

Tables D-1 and D-2 compare states on their total personal income and the percentage gain in each state. Per capita personal income is featured in Tables D-3 through D-6, providing more detail about the relative financial well-being of individuals within each state through the use of statewide population as a common denominator.

*Disposable personal income* represents the personal income of residents *minus* taxes and other required payments, such as fines, penalties, and fees. Disposable personal income reflects the amount of income remaining for expenditure on consumer goods, for example, and represents a different measure of "wealth" among states. Tables D-8 through D-10 feature *per capita* disposable personal income, or the amount of personal income for every person in each state, thereby providing some comparability across states for this measure.

Table D-11 compares the states on a measure of personal income geared more closely to the consumers of public education services—the number of pupils as measured in average daily attendance. Table D-12 shows the relative significance of government activity as it contributes to total personal income, by measuring personal income from government and government enterprises as a percent of the total. Income from farming activities is compared by state in Table D-13, while Tables D-14 and D-15 contain average household buying incomes and retail sales per household, measures similar to disposable personal income in their approximation of consumer spending power in each state.

# GOVERNMENTAL REVENUE

Revenue of state and local governments, principally revenue generated through taxation, is the subject of tables in the E Series. These tables contain comparative information about the amounts and significance of selected tax sources by state, providing insight into the financial resources of government that are available for financing public education.

General revenue, own-source revenue, and tax collections are presented for state and local governments. Revenue data are expressed on a per resident basis, or as proportions of state personal income. The latter expression, found in Tables E-3, E-5, E-9, E-12, E-15, and E-16, indicates that for every $1,000 of personal income in a state, a certain amount of revenue (sales tax revenue, e.g.) is generated. This is referred to as the "tax effort" of government units, and also can be computed for expenditure categories, as shown in Series G and H.

Tables E-13 through E-16 feature state revenue from general sales and from individual income taxes, expressed on a per capita basis and per $1,000 of state personal income. Please note that low amounts appear for several states, indicating that those taxes are restricted in some fashion, such as the income tax on individuals in New Hampshire. Please consult references on state tax characteristics for clarifying information.

# SCHOOL REVENUE

F Series Tables compare states on their sources of public school revenue. Funds received by public school districts from federal, state, and from local sources are listed for each state, and are expressed in relation to the number of pupils in each state, to the state's personal income, and according to the percentage distribution across the three government sources.

The tables that follow examine the states' relative positions with regard to school revenues per $1,000 of state personal income (F-3, F-4). These measures, as with the examples in the E Series, make it easier to compare the effort of government units to provide financial support for public school programs through measurement of that support with the common denominator of personal income.

Please note that the school revenue data contained in F Series tables update those featured in *Estimates of School Statistics, 1988-89*, published in April. State education departments have the option of revising their estimated data for inclusion in *Rankings*.

Please see page 53 for additional information provided by the state education departments to help explain data reported for their states in F Series Tables.

# GOVERNMENT EXPENDITURES

State and local government spending characteristics provide useful comparative information about the resources, needs and priorities for public services. Expenditures for government programs vary across states for many reasons, and state-by-state comparisons should be made while keeping them in mind—demographic, economic, and political factors are but a few.

Tables in the G Series describe the spending done by state governments and by state and local governments combined. Expenditure data are expressed on a per capita basis, allowing closer comparison of the differences in levels and objects of state and local government spending, as well as their positions relative to the U.S. average. Use of state personal income in selected tables provides opportunities for comparing the relative "effort" of government units to fund program areas, including public education.

# SCHOOL EXPENDITURES

Expenditures for public education often are compared among states through the use of measures contained in this section. Expenditures for elementary-secondary schools and for higher education can serve as indicators of state and local government "effort" to fund these services. Examples of measures used to compare states on spending for education include current expenditures per pupil in Average Daily Attendance (ADA) or Average Daily Membership (ADM)—two common measurements of education support. In addition, school expenditure data are displayed in relation to state population and state personal income as percentages of total state expenditures, or as proportions of national averages.

Expenditure data are shown for elementary and secondary schools in combination with higher education, and with K-12 spending featured separately. Again, knowledge about public education systems and their funding characteristics is required to make fair comparisons of state-local government financial support of education, relative to that found in other states.

Please see page 53 for additional information provided by the state education departments to help explain data reported for their states in H Series Tables.

# STATE DEPARTMENT OF EDUCATION FOOTNOTES

The education data in *Rankings* represent the most recent actual or estimated data available from state departments of education.

The following state education departments provided additional information to help explain data reported for their states in B, C, F, and H Series:

| | |
|---|---|
| ALASKA | The state department of education does not collect teacher salary data. |
| ARIZONA | Enrollment total is year-end enrollment. |
| CALIFORNIA | Local revenues to support schools are determined by the state legislature and governor. Boards of education have no authority to raise revenues for their districts. |
| HAWAII | Classroom teachers are paid on the same salary scale and are in the same collective bargaining unit. Any differences between elementary and secondary teacher average salaries therefore are due to differences in longevity of service and educational credits earned beyond the bachelor's degree. |
| KANSAS | Salary data for 1988-89 include for the first time payments made under section 125 of the IRS code, so called "cafeteria" benefit plans. For that reason the increase shown from 1987-88 is greater than would normally be expected. |
| MISSISSIPPI | State education agency receipts and expenditures are not included. |
| NEVADA | Large increase in nonrevenue receipts is due to the selling of bonds for school construction in Clark County School District. |
| NEW JERSEY | Financial data shown for the school years 1987-88 and 1988-89 are estimates. |
| OREGON | Salaries include 6 percent employer pick-up of employee portion of retirement contribution. |
| SOUTH CAROLINA | Total school districts include two special districts established by the General Assembly.<br>Membership and attendance figures include kindergarten students reported at half count. |
| TENNESSEE | Salary data includes career ladder supplement. |
| WASHINGTON | Federal food reimbursements were not deducted from food service expenditures.<br>Enrollment figures have been adjusted to include handicapped program children and to eliminate any double counts. |

# GLOSSARY

AVERAGE DAILY ATTENDANCE: Average of pupils attending when schools are actually in session.

AVERAGE DAILY MEMBERSHIP: An average of the pupils belonging, those present plus those absent, when schools are actually in session.

BASIC ADMINISTRATIVE UNIT: The local school district; the unit for the operation of elementary and secondary schools or for contracting for school services.

CAPITAL OUTLAY: An expenditure that results in the acquisition of fixed assets or additions to fixed assets, which are presumed to have benefits for more than one year. It is an expenditure for land or existing buildings; improvements of grounds; construction of buildings; additions to buildings; remodeling of buildings; initial, additional, and replacement of equipment.

CURRENT EXPENDITURES: All amounts spent at all levels of administration—state, intermediate, and local—for public elementary and secondary day schools for administration, instructional services, plant operation and maintenance, fixed charges, and other school services (attendance, health services, transportation, food services, etc.). Includes the cost of operating the state department of education and the intermediate (county) departments of education; employers' (state, intermediate, and local) contributions to retirement systems and/or social security on behalf of public school employees; and federal, state, and local funds to cover deficits (gross expenditure less sales) of school lunch and milk programs.

DEBT: The major portion of all state and local government debt is long-term indebtedness. A substantial portion of such long-term debt is nonguaranteed debt, i.e., obligations payable solely from pledged earnings of specific activities or facilities, from special assessments, or from specific nonproperty taxes.

EDUCATION: The provision or support of schools and other education facilities and services.

EFFECTIVE BUYING INCOME: Same as disposable personal income; is obtained by deducting from personal income direct personal taxes and certain other nontax payments to government. The personal taxes deducted include federal, state, and local income taxes, estate and gift taxes, and miscellaneous licenses and permits. Property taxes are not deducted.

ENROLLMENT: A cumulative count of the number of different pupils registered during the entire school year. New entrants are added, but those leaving are not subtracted.

EXPENDITURES: All amounts of money paid out by a government—net of recoveries and other correcting transactions—other than for retirement of debt, investment in securities, extension of credit, or as agency transactions. Expenditures includes only external transactions of a government and excludes noncash transactions, such as the provision of perquisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments involved.

FALL ENROLLMENT: The count of the pupils registered in the fall of the school year, usually October.

FIRE PROTECTION: Comprises fire-fighting and fire-protection activities of local governments.

FUNCTIONS: Public purposes served by governmental activities (education, highways, public welfare, etc.). Expenditures for each function include amounts for all types of expenditures serving the purpose concerned.

GENERAL EXPENDITURES: All expenditures of a government other than utility expenditures, liquor store expenditures, and insurance trust expenditures.

GENERAL REVENUE: All revenue of a government except the kinds of revenue classified as utility revenue, liquor store revenue, and insurance trust revenue. All tax collections, even if designated for insurance trust or local utility purposes, are classified under general revenue.

GENERAL SALES TAXES: Sales or gross receipts taxes which are applicable, with only specified exceptions, to all types of goods and services, or all gross income, whether at a single or at classified rates.

HEALTH: Health services, other than hospital care, including health research, clinics, nursing, immunization, and other categorical, environmental, and general public health activities. School health services provided by health agencies (rather than school agency) are included.

HIGHWAYS: Streets, highways, and structures necessary for their use; street lighting; snow and ice removal; toll highway and bridge facilities; and ferries.

HIGHER EDUCATION: Includes facilities and activities of all education institutions beyond the high school level operated by state or local governments, except that agricultural experiment stations and agricultural extension services are classified under natural resources, and university-operated hospitals serving the public are classed under hospitals. These education categories include related services such as pupil transportation, school milk and lunch programs, cafeterias, health and recreational programs, and the like. Revenue and expenditures for school lunch services, dormitories, athletic events, and other auxiliary services are included on a gross basis.

HOSPITALS: Establishment and operation of hospital facilities, provision of hospital care, and support of other public or private hospitals.

HOUSEHOLD: A unit that includes all persons occupying a house, apartment, or room regarded as a dwelling unit, excluding group quarters such as dormitories.

INDIVIDUAL INCOME TAX: Taxes on individuals measured by net income, and taxes imposed on special types of income (e.g., interest, dividends, and income from intangibles).

INSTRUCTIONAL STAFF: Number of positions, not the number of different individuals occupying the positions during the school year. In local schools includes all public elementary and secondary (junior and senior high) day school positions (or full-time equivalents) that are in the nature of teaching or in the improvement of the teaching-learning situation. Includes consultants or supervisors of instruction, principals, teachers, guidance personnel, librarians, psychological personnel, and other instructional staff. Excludes attendance personnel, health services personnel, clerical personnel, and junior college staff. In institutions of higher education includes those engaged in teaching and related academic research in junior colleges, colleges, and universities, including those in hospitals, agricultural experiment stations and farms.

INTEREST ON DEBT: Annual expenditures to pay interest only on long-term debt.

LIVE BIRTHS: Number of births in the U.S.

NONINSTRUCTIONAL STAFF: In local schools includes administrative and clerical personnel; plant operation and maintenance employees; bus drivers; lunchroom, health, and recreational personnel engaged by school systems. In institutions of higher education includes cafeteria workers, clerical and custodial workers in colleges and universities, hospitals, agricultural experiment stations, and farms.

PERSONAL INCOME: State personal income is the current income received by residents of the states from all sources, including transfers from government and business, but excluding transfers among persons. It is a before-tax measure. The total includes nonmonetary income or income received in kind. The figures include income of individuals and also income of nonprofit institutions; private trust funds; and private pension, health, and welfare funds.

POLICE PROTECTION: Preservation of law and order and traffic safety. Includes highway police patrols, crime prevention activities, police communications, detention and custody of persons awaiting trial, traffic safety, vehicular inspection, and the like.

PROPERTY TAXES: Taxes conditioned on ownership of property and measured by its value. Includes both general property taxes (i.e., relating to property as a whole, real and personal, tangible or intangible, whether taxed at a single rate or at classified rates) and special property taxes (i.e., on selected types of property, such as motor vehicles or certain or all tangibles, subject to rates that are not directly related to rates applying for general property taxation).

PUBLIC WELFARE: Support of and assistance to eligible persons contingent upon their need. Excludes pensions to former employees and other benefits not contingent on need. Expenditures under this heading include cash assistance payments directly to needy persons under categorical and other welfare programs; vendor payments made directly to private purveyors for medical care, burials, and other services provided under welfare programs; welfare institutions; and any intergovernmental or other direct expenditures for welfare purposes. Any services provided directly by the government through its hospital and health agencies are classed under those headings.

RESIDENT POPULATION: In addition to those who are residents of an area, the figure also includes armed forces personnel who are stationed in the area.

REVENUE: Revenue receipts for public school purposes from LOCAL, intermediate and other sources include all funds for direct expenditures by local and intermediate districts for school services, for the operation of intermediate departments of education,

for employer contributions to retirement systems and/or social security on behalf of public school employees, for the purchase of materials for distribution of local school districts, etc. Includes net receipts from revolving funds or clearing accounts only when such funds are available for general expenditure by the local board of education. Includes gifts and tuition and fees received from patrons.

Revenue receipts from STATE sources include all funds for the operation of the state department of education, for state (employer) contributions to retirement systems and/or social security on behalf of school employees, for grants in aid to intermediate and local school districts for school purposes (including funds available from state bond issues for such grants and the costs of textbooks, buses, supplies, etc., purchased by the state for distribution to local school districts), for the payment of interest on state bonds issued to provide grants to local school districts, and all other state revenue for public school purposes. Money collected by the state as an agent of a lesser unit and turned over in like amounts to that unit is not included.

Revenue receipts from FEDERAL sources include money distributed from the federal treasury either directly to local school districts or through the state and county, including grants for vocational education, for aid to federally affected areas, for National Defense Education Act programs, for school lunch and milk programs, for educating Indians in local public schools, and money derived from federal forest reserves and federal oil royalties. (No special effort is made to include amount of grants in kind, for example, operation of the school lunch program).

REVENUE FROM OWN SOURCES: All revenue of a government (taxes and other) except intergovernmental.

SCHOOL-AGE POPULATION: Population age 5 through 17, inclusive (excluding armed forces abroad).

TAXES: Compulsory contributions exacted by a government for public purposes, except employee and employer assessments for retirement and social insurance purposes, which are classed as insurance trust revenue. All tax revenue is classified under general revenue and comprises amounts received (including interest and penalties but excluding refunds) from taxes imposed by the recipient government. Amounts received by a government from a tax it imposes are counted as tax revenue of that government, even though initially collected by another government; however, any amounts retained are treated as tax revenue of the collecting government. Tax amounts subsequently distributed to other governments are classified as intergovernmental transactions.

TOTAL REVENUE RECEIPTS: Includes all revenue receipts available for expenditure for current expenses, capital outlay, and debt service for public schools, including all appropriations from general funds of federal, state, county, and local governments; receipts from taxes levied for school purposes; income from permanent school funds and endowments; income from leases of school lands; interest on bank deposits; tuition; gifts; etc. Amounts that increase the school indebtedness or that represent exchange of school property for money are excluded.

# Foreword

Interest in education improvement and renewal, which heightened during the early 1980s, continues to capture the attention of researchers, policymakers, and the public. While much has been done to enhance public education programs and services, much work and many challenges remain. In this setting, NEA Research offers *Rankings of the States, 1990* to its state and local affiliates as a tool for use throughout this period of public school reform.

*Rankings of the States* provides state-level data on an array of topics relevant to the complex enterprise of public education. State-by-state figures on government and school financing, state demographics, and public school personnel permit a statistical assessment of the scope of public education and an identification of emerging trends in key areas.

The *Rankings* report enjoys a long history of use by affiliates of the NEA as well as by planners and policymakers in other organizations. It has, since the 1960s, presented facts and figures useful in determining ways in which states vary from one another or from national averages on selected statistics and in explaining how the reported data reflect social and economic characteristics and changes. Of course, no one table or set of tables can tell the entire story of a state's education offerings. One must consider a state's tax system, its provision of other public services, the characteristics of its population, and more. It is therefore unwise to draw conclusions solely from the tables in this report, and the reader is urged to supplement these rank-ordered data with specific information about state and local activities and services related to public education.

State department of education staff who contributed to this report deserve much credit for the current public school data it presents, as do the state education associations across the country.

*NEA Research*

# Technical Notes

*Rankings of the States, 1990* contains rank-ordered statistics for the fifty states and the District of Columbia. All state data are ranked beginning with the largest figure. When the values of two or more states are the same, they are assigned the same rank, with the appropriate number resumed with the next state in rank. In this case, they appear in rank order before rounding.

The education data in *Rankings* are the most recent actual or estimated data available from state departments of education. Where no data are available from a state education department, NEA Research has provided an estimate, which is identified by an asterisk in Series B, C, F, and H tables.

The State Department of Education Notes (page 53) contain additional information provided by state education departments to help explain data reported for their states.

*Rankings of the States, 1990* features revised figures for some public school data previously published in *Estimates of School Statistics, 1989-90,* another report of NEA Research, published in April 1990. State education agencies were invited to review their fall 1989 estimates and revise them for inclusion in this report. For this reason, data in B, C, F, and H Series may differ from those in *Estimates of School Statistics.*

The availability of data from federal government and other sources dictates the presence or absence of certain tables in this report. Statistics for full-time employment in higher education in 1988 presented in the C Series are computed by the Bureau of the Census with a formula using hours worked by part-time employees.

Please note that tables featuring Average Daily Membership (ADM) do not contain values for the United States as a whole since seven states do not compute or provide estimates for their statewide ADM. Consequently, averages are not computed in those cases—this fact is reflected by an "NA" notation. Tables involving ADM data are B-5, B-6, H-14, and H-15.

Also note that a detachable section has been added to the central pages of this publication. Two pages for selected data from the *Rankings* publication have been provided to help state affiliates and general users develop a school funding profile. Comparisons with neighboring states can be developed for any *Rankings* tables by using the last page of the detachable section.

Tables D-14 and D-15 feature data from the *Sales and Marketing Management Survey of Buying Power*, a copyrighted work. Reproduction of these tables is prohibited unless permission is obtained directly from Sales and Marketing Management, 633 Third Avenue, New York, New York, 10017.

# Population—A Series

Tables in the A Series provide information about the population of states and can serve as indicators of the relative demand for public education services or other public programs.

The level and change in total state population are featured in Tables A-1 through A-4. These tables help to identify patterns of growth or decline for each state and the resulting implications for staffing and financing public education institutions. Population density has been computed for Table A-12, while the number of births by state is the focus of A-10 and A-11.

School-age population data in Tables A-5 and A-6 focus directly on the consumers of public elementary and secondary education. Combining these figures with public school enrollment tables in the B Series can indicate demand for and participation in public school services.

Tables A-7 through A-9 define the adult population within states. Changes in the size of adult and elderly age groups affect demand for public school programs and the degree to which funding for education faces competition from other public sector programs. These tables also can indicate the willingness of citizens within a state to support public education.

## Enrollment, Attendance, and Membership—B Series

Tables in the B Series feature data on student participation in public elementary and secondary schools. The tables include current statistics on pupils enrolled and the change in enrollment over the previous year and over a decade. These tables enable assessments of the states that can expect to experience increasing demand for public school services and staff.

Alternative measures of public school participation also are included in this series. Average Daily Attendance (ADA) and Average Daily Membership (ADM) are presented in Tables B-4 through B-7 and differ from fall enrollment counts in that they present averages of pupil participation *year round*. Departments of education in seven states do not provide data for ADM, and these instances are identified as "NA" in Tables B-5 and B-6 and throughout other series as appropriate. Also, there are no U.S. totals or computed averages using ADM, as national figures for this measure cannot be considered to represent totals or averages for all states.

Table B-9 shows the percent change in the number of high school graduates over a ten-year period, useful in predicting demand for higher education services in future years.

Please see page 53 for additional information provided by the state education departments to help explain data reported for their states in B Series tables.

### Tables

B-1. Number of Basic Administrative Units (Operating Public School Districts), 1989-90
B-2. Public School Enrollment, Fall 1989
B-3. Percent Change in Public School Enrollment, Fall 1988 to Fall 1989
B-4. Average Daily Attendance in Public Schools, 1989-90
B-5. Average Daily Membership in Public Schools, 1989-90
B-6. Average Daily Attendance as Percent of Average Daily Membership, 1989-90
B-7. Average Daily Attendance as Percent of Fall Enrollment, 1989-90
B-8. Number of Public High School Graduates, 1989-90
B-9. Percent Change in Number of High School Graduates, 1979-80 to 1989-90

1335

# Faculty—C Series

Personnel in local public schools and in public institutions of higher education are the focus of tables in the C Series. Changes in the number of staff employed in education institutions as well as their levels of compensation reflect trends in enrollment, economy, and program priorities expressed by state residents.

The number of staff employed in public schools is featured in Table C-1. The statistics for full-time employment in higher education presented in Table C-2 through C-4 have been computed by the Census with a formula using hours worked by part-time employees. A payroll-based formula was used prior to the 1985 Census survey. Three tables of pupil load—pupils enrolled per teacher, pupils in ADA per teacher, and pupils in ADM per teacher—are presented in Tables C-6 through C-8.

Average salaries of public classroom teachers and total instructional staff are featured in C-10 through C-23. These average salary data are presented in "current" or unadjusted dollars and also in "constant" or inflation-adjusted dollars. These computations employ the Consumer Price Index for all Urban Consumers (CPI-U), converted to a school-year basis, using the 1979-80 school year as the base (1979-80 = 100.0).

The presentation of salary changes in constant dollar terms enables identification of salary increases attributable to inflation. The resulting picture for most states is a salary gain over the past decade far below what the public may intend or know of. As an advocacy tool, the use of these salary data can do much to dispel myths of huge jumps in the purchasing power of teacher salaries.

Please see page 53 for additional information provided by the state education departments to help explain data reported for their states in C Series tables.

## Tables

C-1. Total Instructional Staff in Public Elementary and Secondary Schools, 1989-90
C-2. Total Instructional Staff (Full-Time Equivalent) in Public Institutions of Higher Education, October 1988
C-3. Total Noninstructional Staff (Full-Time Equivalent) in Public Institutions of Higher Education, October 1988
C-4. Total Instructional and Noninstructional Staff (Full-Time Equivalent) in Public Institutions of Higher Education, October 1988
C-5. Number of Teachers in Public Elementary and Secondary Schools, 1989-90
C-6. Pupils Enrolled per Teacher in Public Elementary and Secondary Schools, Fall 1989
C-7. Pupils in Average Daily Attendance per Teacher in Public Elementary and Secondary Schools, 1989-90
C-8. Pupils in Average Daily Membership per Teacher in Public Elementary and Secondary Schools, 1989-90
C-9. Percent of Public School Teachers Who Are Men, 1989-90
C-10. Estimated Average Salaries of Public School Teachers, 1988-89 (Revised)
C-11. Estimated Average Salaries of Public School Teachers as Percent of National Average, 1988-89 (Revised)
C-12. Estimated Average Salaries of Public School Teachers, 1989-90
C-13. Estimated Average Salaries of Public School Teachers as Percent of National Average, 1989-90
C-14. Percent Change in Average Salaries of Public School Teachers, 1979-80 to 1989-90 (Current Dollars)
C-15. Percent Change in Average Salaries of Public School Teachers 1979-80 to 1989-90 (Constant Dollars)

**Tables (cont.)**

C-16. Percent Change in Average Salaries of Public School Teachers, 1988-89 to 1989-90

# General Financial Resources—D Series

*Total personal income* measures the overall economic activity within a specific geographic area. It is the aggregate income from *all* sources received by persons residing in a state, and it has a significant effect on the total income or financial resources available to governmental jurisdictions through taxation. This, in turn, affects the prospects for financing public education and other government services. State personal income is used throughout the tables in this report to gauge the ability and effort of states to generate funds for public programs, and it is considered by some to present a better method of comparison than the use of state population for per capita computations.

Tables D-1 and D-2 compare states on their total personal income and the percentage gain in each state. *Per capita personal income* provides more detail about the relative financial well-being of individuals within each state through the use of statewide population as a common denominator and is featured in Tables D-3 through D-6.

*Disposable personal income* represents the personal income of residents *minus* taxes and other required payments, such as fines, penalties, and fees. Disposable personal income reflects the amount of income remaining for expenditure on consumer goods, for example, and represents a different measure of "wealth" among states. Tables D-8 through D-10 feature *per capita* disposable personal income, or the amount of personal income for every person in each state, thereby providing some comparability across states for this measure.

Table D-11 compares the states on a measure of personal income geared more closely to the consumers of public education services—the number of pupils as measured in average daily attendance. Table D-12 shows the relative significance of government activity as it contributes to total personal income, by measuring personal income from government and government enterprises as a percent of the total. Income from farming activities is compared by state in Table D-13, while Tables D-14 and D-15 contain average household buying incomes and retail sales per household, measures similar to disposable personal income in their approximation of consumer spending power in each state.

**Tables**

D-1. Total Personal Income, 1988
D-2. Percent Change in Total Personal Income, 1987 to 1988
D-3. Per Capita Personal Income, 1988
D-4. Per Capita Personal Income as Percent of National Average, 1988

# Governmental Revenue—E Series

Revenue of state and local governments, principally revenue generated through taxation, is the subject of the tables in the E Series. These tables contain comparative information about the amounts and significance of selected tax sources by state, providing insight into the financial resources of government that are available for financing public education.

General revenue, own-source revenue, and tax collections are presented for state and local governments. Revenue data are expressed on a per capita basis or as a proportion of state personal income. The latter expression, found in Tables E-3, E-5, E-9, E-12, E-15, and E-16, indicates that for every $1,000 of personal income in a state, a certain amount of revenue (sales tax revenue, e.g.) is generated. This is referred to as the "tax effort" of government units and also can be computed for expenditure categories, as shown in Series G and H.

Tables E-13 through E-16 feature state revenue from general sales and from individual income taxes, expressed on a per capita basis and per $1,000 of state personal income. Please note that low amounts appear for several states, indicating that those taxes are restricted in some fashion, such as the income tax on individuals in New Hampshire. Please consult references on state tax characteristics for clarifying information.

## Tables

E-1. Per Capita Total General Revenue of all State and Local Governments, 1987-88
E-2. Per Capita General Revenue of State and Local Governments from Own Sources, 1987-88
E-3. General Revenue of State and Local Governments from Own Sources, 1987-88, per $1,000 of Personal Income in 1988
E-4. Per Capita Total Tax Revenues of State and Local Governments, 1987-88
E-5. State and Local Tax Revenues in 1987-88 per $1,000 of Personal Income in 1988
E-6. Per Capita Property Tax Revenue of State and Local Governments, 1987-88
E-7. Per Capita Property Tax Revenue of Local Governments, 1987-88
E-8. Property Tax Revenue of State and Local Governments as Percent of Total Tax Revenue, 1987-88
E-9. State and Local Property Tax Revenue in 1987-88 per $1,000 of Personal Income in 1988
E-10. Per Capita State Tax Revenue, 1987-88
E-11. Per Capita Local Tax Revenue, 1987-88
E-12. State Tax Revenue in 1987-88 per $1,000 of Personal Income in 1988
E-13. Per Capita State Individual Income Tax Revenue, 1987-88
E-14. Per Capita State General Sales Tax Revenue, 1987-88
E-15. State Individual Income Tax Revenue in 1987-88 per $1,000 of Personal Income in 1988
E-16. State General Sales Tax Revenue in 1987-88 per $1,000 of Personal Income in 1988

# School Revenue—F Series

F Series tables compare states on their sources of public school revenue. Funds received by public school districts from federal, state, and local sources are listed for each state and are expressed in relation to the number of pupils in each state, to the state's personal income, and according to the percentage distribution across the three government sources.

The tables that follow examine each state's relative position with regard to school revenues per $1,000 of state personal income (F-3, F-4). These measures, as with the examples in the E Series, make it easier to compare the effort of government units to provide financial support for public school programs through measurement of that support with the common denominator of personal income.

Please note that the school revenue data contained in F Series tables update those featured in *Estimates of School Statistics, 1989-90*, published in April. State education departments have the option of revising their estimated data for inclusion in *Rankings*.

Please see page 53 for additional information provided by the state education departments to help explain data reported for their states in F Series tables.

## Tables

F-1. Public School Revenue per Pupil in Average Daily Attendance, 1988-89 (Revised)
F-2. Public School Revenue per Pupil in Average Daily Attendance, 1989-90
F-3. Public School Revenue in 1987-88 per $1,000 of Personal Income in 1988
F-4. State and Local Revenue for Public Schools in 1987-88 per $1,000 of Personal Income in 1988
F-5. Estimated Percent of Revenue for Public Elementary and Secondary Schools from Local Governments, 1988-89 (Revised)
F-6. Estimated Percent of Revenue for Public Elementary and Secondary Schools from Local Governments, 1989-90
F-7. Estimated Percent of Revenue for Public Elementary and Secondary Schools from State Governments, 1988-89 (Revised)
F-8. Estimated Percent of Revenue for Public Elementary and Secondary Schools from State Governments, 1989-90
F-9. Estimated Percent of Revenue for Public Elementary and Secondary Schools from the Federal Government, 1988-89 (Revised)
F-10. Estimated Percent of Revenue for Public Elementary and Secondary Schools from the Federal Government, 1989-90
F-11. Local Public School Revenue as a Percent of Combined State and Local School Revenue, 1989-90

# Government Expenditures—G Series

State and local government spending characteristics provide useful comparative information about the resources, needs, and priorities for public services. Expenditures for government programs vary across states for many reasons, and state-by-state comparisons should be made while keeping them in mind—demographic, economic, and political factors are but a few.

Tables in the G Series describe the spending done by state governments and by state and local governments combined. Expenditure data are expressed on a per capita basis, allowing closer comparison of the differences in levels and objects of state and local government spending, as well as their positions relative to the U.S. average. Use of state personal income in selected tables provides an opportunity to compare the relative "effort" of government units to fund program areas, including public education.

## Tables

G-1. Per Capita Total General Expenditures of State Governments for all Functions, 1987-88
G-2. State Government General Expenditures in 1987-88 per $1,000 of Personal Income in 1988
G-3. Per Capita Total General Expenditures of State and Local Governments, 1987-88
G-4. State and Local Government General Expenditures in 1987-88 per $1,000 of Personal Income in 1988
G-5. Per Capita Expenditures of State and Local Governments for Public Welfare, 1987-88
G-6. Per Capita Expenditures of State and Local Governments for Health and Hospitals, 1987-88
G-7. Per Capita Expenditures of State and Local Governments for Police Protection, 1987-88
G-8. Per Capita Expenditures of State and Local Governments for Fire Protection, 1987-88
G-9. Per Capita Expenditures of State and Local Governments for Highways, 1987-88
G-10. Per Capita Expenditures of State and Local Governments for Capital Outlay, 1987-88
G-11. Per Capita Expenditures of State and Local Governments for Interest on Debt, 1987-88

# School Expenditures—H Series

Expenditures for public education often are compared among states through the use of measures contained in this section. Expenditures for elementary and secondary schools and for higher education can serve as indicators of state and local government "effort" to fund these services. Examples of measures used to compare states on spending for education include current expenditures per pupil in Average Daily Attendance (ADA) or Average Daily Membership (ADM). In addition, school expenditure data are displayed in relation to state population and state personal income and as percentages of total state expenditures or as proportions of national averages.

Expenditure data are shown for elementary and secondary schools separately and in combination with higher education. Again, knowledge about public education systems and their funding characteristics is required to make fair comparisons of state-local government financial support of education, relative to that found in other states.

Please see page 53 for additional information provided by the state education departments to help explain data reported for their states in H Series tables.

**Tables**

H-1. Per Capita State Government Expenditures for all Education, 1987-88
H-2. State Government Expenditures for all Education in 1987-88 per $1,000 of Personal Income in 1988
H-3. Per Capita Expenditures of State and Local Governments for all Education, 1987-88
H-4. State and Local Government Expenditures for all Education in 1987-88 per $1,000 of Personal Income in 1988
H-5. State and Local Government Expenditures for all Education as Percent of Total General Expenditures for all Functions, 1987-88
H-6. Per Capita State Expenditures for State Institutions of Higher Education, 1987-88
H-7. Per Capita State and Local Government Expenditures for Higher Education, 1987-88
H-8. Per Capita Expenditures of State and Local Governments for Public Elementary and Secondary Schools, 1987-88
H-9. Estimated Current Expenditures for Public Elementary and Secondary Schools per Pupil in Average Daily Attendance, 1988-89 (Revised)
H-10. Current Expenditures for Public Elementary and Secondary Schools per Pupil in Average Daily Attendance as Percent of National Average, 1988-89 (Revised)
H-11. Estimated Current Expenditures for Public Elementary and Secondary Schools per Pupil in Average Daily Attendance, 1989-90
H-12. Current Expenditures for Public Elementary and Secondary Schools per Pupil in Average Daily Attendance as Percent of National Average, 1989-90
H-13. Estimated Current Expenditures for Public Elementary and Secondary Schools in 1987-88 per $1,000 of Personal Income in 1988
H-14. Current Expenditures for Public Elementary and Secondary Schools per Pupil in Average Daily Membership, 1988-89 (Revised)
H-15. Current Expenditures for Public Elementary and Secondary Schools per Pupil in Average Daily Membership, 1989-90

*Data estimated by NEA.

# State Department of Education Notes

| | |
|---|---|
| **Arizona** | Enrollment shown is for end of year. |
| **Georgia** | Student population enumerated by FTE (Full Time Equivalency) count. |
| **Mississippi** | The total school district count does not include four agricultural high schools as legally they are not school districts; however, their data are included in the enrollment figures. |
| **Montana** | Fall enrollment includes prekindergarten and kindergarten; however, ADA and ADM data do not. |
| **New York** | For school year 1989-90, the state government deferred payments of $643 million to the New York State Teachers' Retirement System. This reduced the percentage of school revenues from the state and increased the percentage of revenues from local sources. It affects tables F-2, F-6, and F-8. The deferral also reduced current expenditures, which affects tables H-11, H-12, and H-15. |
| **North Dakota** | Due to a December 5, 1989, tax deferral election, the state appropriation for elementary and secondary education was reduced by $15.2 million. |
| **Ohio** | Prior to FY89 total current expenditures did not include MRDD's and Youth Services. |
| **Oregon** | Salaries include a 6 percent pickup of employee portion of retirement contribution by employer. |
| **South Carolina** | ADM and ADA figures include kindergarten students reported at half count.<br><br>Teacher average salaries reported since 1988 include contract amount plus incentive. |
| **Washington** | Federal food reimbursements were not deducted from food service expenditures. |

# Glossary

**Average Daily Attendance, ADA:** Average of pupils attending when schools are actually in session.

**Average Daily Membership, ADM:** An average of the pupils belonging, those present plus those absent, when schools are actually in session.

**Basic Administrative Unit:** The local school district; the unit for the operation of elementary and secondary schools or for contracting for school services.

**Capital Outlay:** An expenditure that results in the acquisition of fixed assets or additions to fixed assets, which are presumed to have benefits for more than one year. It is an expenditure for land or existing buildings, improvements of grounds, construction of buildings, additions to buildings, remodeling of buildings or initial, additional, and replacement equipment.

**Coefficient of Variation:** The standard deviation expressed as a percent of the mean. Used to compare standard deviations of varying groups of data.

**Current Expenditures:** All amounts spent at all levels of administration—state, intermediate, and local—for public elementary and secondary schools for administration, instructional services, plant operation and maintenance, fixed charges, and other school services (attendance, health services, transportation, food services, etc.). Includes the cost of operating the state department of education and the intermediate (county) departments of education; employers' (state, intermediate, and local) contributions to retirement systems and/or Social Security on behalf of public school employees; and federal, state, and local funds to cover deficits (gross expenditure less sales) of school lunch and milk programs.

**Debt:** The major portion of all state and local government debt is long-term indebtedness. A substantial portion of such long-term debt is nonguaranteed debt, i.e., obligations payable solely from pledged earnings of specific activities or facilities, from special assessments, or from specific nonproperty taxes.

**Education:** The provision or support of schools and other education facilities and services.

**Effective Buying Income:** Same as disposable personal income; is obtained by deducting from personal income direct personal taxes and certain other nontax payments to government. The personal taxes deducted include federal, state, and local income taxes, estate and gift taxes, and miscellaneous licenses and permits. Property taxes are not deducted.

**Effort:** A measure that relates the capacity to support public schools (defined as the personal income of the residents of the state) to the revenues obtained, or expenditures made, on behalf of public schools. The latest available personal income data determine the school year for which school revenues and expenditures are chosen for comparison. Personal income for the year shown would be available to pay school taxes or allay school expenditures in that school year.

**Enrollment:** A cumulative count of the number of pupils registered during the entire school year. New entrants are added, but those leaving are not subtracted.

**Expenditures:** All amounts of money paid out by a government—net of recoveries and other correcting transactions—other than for retirement of debt, investment in securities, extension of credit, or as agency transactions. Expenditures include only external transactions of a government and exclude noncash transactions, such as the provision of perquisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments involved.

**Fall Enrollment:** The count of the pupils registered in the fall of the school year, usually October.

**Fire Protection:** Comprises fire-fighting and fire-protection activities of local governments.

**Full-Time Equivalent Employment:** A computed statistic representing the number of full-time employees that could have been employed if the reported number of hours worked by part-time employees had been worked by full-time employees. This statistic is calculated separately for each function of a government by dividing the "part-time hours paid" by the standard number of hours for full-time employees in the particular government and then adding the resulting quotient to the number of full-time employees.

**Functions:** Public purposes served by governmental activities (education, highways, public welfare, etc.). Expenditures for each function include amounts for all types of expenditures serving the purpose concerned.

**General Expenditures:** All expenditures of a government other than utility expenditures, liquor store expenditures, and insurance trust expenditures.

**General Revenue:** All revenue of a government except the kinds of revenue classified as utility revenue, liquor store revenue, and insurance trust revenue. All tax collections, even if designated for insurance trust or local utility purposes, are classified under general revenue.

**General Sales Taxes:** Sales or gross receipts taxes that are applicable, with only specified exceptions, to all types of goods and services or all gross income, whether at a single or at classified rates.

**Health:** Health services, other than hospital care, including health research, clinics, nursing, immunization, and other categorical, environmental, and general public health activities. School health services provided by health agencies (rather than school agency) are included.

**Highways:** Streets, highways, and structures necessary for their use; street lighting; snow and ice removal; toll highway and bridge facilities; and ferries.

**Higher Education:** Includes facilities and activities of all education institutions beyond the high school level operated by state or local governments, except that agricultural experiment stations and agricultural extension services are classified under natural resources, and university-operated hospitals serving the public are classed under hospitals. These education categories include related services such as pupil transportation, school milk and lunch programs, cafeterias, health and recreational programs, and the like. Revenue and expenditures for school lunch services, dormitories, athletic events, and other auxiliary services are included on a gross basis.

**Hospitals:** Establishment and operation of hospital facilities, provision of hospital care, and support of other public or private hospitals.

**Household:** A unit that includes all persons occupying a house, apartment, or room regarded as a dwelling unit, excluding group quarters such as dormitories.

**Individual Income Tax:** Taxes on individuals measured by net income and taxes imposed on special types of income (e.g., interest, dividends, and income from intangibles).

**Instructional Staff:** Number of positions, not the number of different individuals occupying the positions during the school year. In local schools includes all public elementary and secondary (junior and senior high) day school positions (or full-time equivalents) that are in the nature of teaching or in the improvement of the teaching-learning situation. Includes consultants or supervisors of instruction, principals, teachers, guidance personnel, librarians, psychological personnel, and other instructional staff. Excludes attendance personnel, health services personnel, clerical personnel, and junior college staff. In institutions of higher education includes those engaged in teaching and related academic research in junior colleges, colleges, and universities, including those in hospitals, agricultural experiment stations, and farms.

**Interest on Debt:** Annual expenditures to pay interest only on long-term debt.

**Live Births:** Number of births in the United States.

**Mean:** The arithmetic average of the data.

**Median:** The middle number in a group when data are arranged in numeric sequence.

**Noninstructional Staff:** In local schools includes administrative and clerical personnel, plant operation and maintenance employees, bus drivers, and lunchroom, health, and recreational personnel engaged by school systems. In institutions of higher education includes cafeteria, clerical, and custodial workers in colleges and universities, hospitals, agricultural experiment stations, and farms.

**Personal Income:** State personal income is the current income received by residents of the states from all sources, including transfers from government and business, but excluding transfers among persons. It is a before-tax measure. The total includes both monetary and nonmonetary income of individuals and income received in kind. It also includes the investment income of nonprofit institutions serving individuals as well as the investment income of private trust funds and private noninsured welfare funds.

**Police Protection:** Preservation of law and order and traffic safety. Includes highway police patrols, crime prevention activities, police communications, detention and custody of persons awaiting trial, traffic safety, vehicular inspection, and the like.

**Property Taxes:** Taxes conditioned on ownership of property and measured by its value. Includes both general property taxes (i.e., relating to property as a whole, real and personal, tangible or intangible, whether taxed at a single rate or at classified rates) and special property taxes (i.e., on selected types of property, such as motor vehicles or certain or all tangibles, subject to rates that are not directly related to rates applying to general property taxation).

**Public Welfare:** Support of and assistance to eligible persons contingent upon their need. Excludes pensions to

former employees and other benefits not contingent on need. Expenditures under this heading include cash assistance payments directly to needy persons under categorical and other welfare programs; vendor payments made directly to private purveyors for medical care, burials, and other services provided under welfare programs; welfare institutions; and any intergovernmental or other direct expenditures for welfare purposes. Any services provided directly by the government through its hospital and health agencies are classed under those headings.

**Range:** The difference between the highest and lowest values in a group of data.

**Resident Population:** In addition to those who are residents of an area, also includes armed forces personnel who are stationed in the area.

**Revenue:** Revenue receipts for public school purposes from LOCAL, intermediate, and other sources include all funds for direct expenditures by local and intermediate districts for school services, for the operation of intermediate departments of education, for employer contributions to retirement systems and/or Social Security on behalf of public school employees, for the purchase of materials for distribution of local school districts, etc. Includes net receipts from revolving funds or clearing accounts only when such funds are available for general expenditure by the local board of education. Includes gifts and tuition and fees received from patrons.

Revenue receipts from STATE sources include all funds for the operation of the state department of education, for state (employer) contributions to retirement systems and/or Social Security on behalf of school employees, for grants in aid to intermediate and local school districts for school purposes (including funds available from state bond issues for such grants and the costs of textbooks, buses, supplies, etc., purchased by the state for distribution to local school districts), for the payment of interest on state bonds issued to provide grants to local school districts, and all other state revenue for public school purposes. Money collected by the state as an agent of a lesser unit and turned over in like amounts to that unit is not included.

Revenue receipts from FEDERAL sources include money distributed from the federal treasury either directly to local school districts or through the state and county, including grants for vocational education, for aid to federally affected areas, for National Defense Education Act programs, for school lunch and milk programs, for educating American Indians in local public schools, and money derived from federal forest reserves and federal oil royalties. (No special effort is made to include amount of grants in kind, for example, operation of the school lunch program.)

**Revenue from Own Sources:** All revenue of a government (taxes and other) except intergovernmental.

**School-Age Population:** Population age 5 through 17, inclusive (excluding armed forces abroad).

**Standard Deviation:** A statistical technique measuring the extent to which data vary from their mean. Used to indicate the relative dispersion of individual items.

**Taxes:** Compulsory contributions exacted by a government for public purposes, except employee and employer assessments for retirement and social insurance purposes, which are classed as insurance trust revenue. All tax revenue is classified under general revenue and comprises amounts received (including interest and penalties but excluding refunds) from taxes imposed by the recipient government. Amounts received by a government from a tax it imposes are counted as tax revenue of that government, even though initially collected by another government; however, any amounts retained are treated as tax revenue of the collecting government. Tax amounts subsequently distributed to other governments are classified as intergovernmental transactions.

**Total Revenue Receipts:** Includes all revenue receipts available for expenditure for current expenses, capital outlay, and debt service for public schools, including all appropriations from general funds of federal, state, county, and local governments; receipts from taxes levied for school purposes; income from permanent school funds and endowments; income from leases of school lands; interest on bank deposits; tuition; gifts; etc. Amounts that increase the school indebtedness or that represent exchange of school property for money are excluded.

# Foreword

Interest in education improvement and renewal, which heightened during the early 1980s, continues to capture the attention of researchers, policymakers, and the public. While much has been done to enhance public education programs and services, much work and many challenges remain. In this setting, NEA Research offers *Rankings of the States, 1991* to its state and local affiliates as a tool for use throughout this period of public school reform.

*Rankings of the States* provides state-level data on an array of topics relevant to the complex enterprise of public education. State-by-state figures on government and school financing, state demographics, and public school personnel permit a statistical assessment of the scope of public education and an identification of emerging trends in key areas.

The *Rankings* report enjoys a long history of use by affiliates of the NEA as well as by planners and policymakers in other organizations. It has, since the 1960s, presented facts and figures useful in determining ways in which states vary from one another or from national averages on selected statistics and in explaining how the reported data reflect social and economic characteristics and changes. Of course, no one table or set of tables can tell the entire story of a state's education offerings. One must consider a state's tax system, its provision of other public services, the characteristics of its population, and more. It is therefore unwise to draw conclusions solely from the tables in this report, and the reader is urged to supplement these rank-ordered data with specific information about state and local activities and services related to public education.

State department of education staff who contributed to this report deserve much credit for the current public school data it presents, as do the state education associations across the country.

*NEA Research*

*September 1991*

# Technical Notes

*Rankings of the States, 1991* contains rank-ordered statistics for the fifty states and the District of Columbia. All state data are ranked beginning with the largest figure. When the values of two or more states are the same, they are assigned the same rank, with the appropriate number resumed with the next state in rank. In this case, they appear in rank order before rounding.

The education data in *Rankings* are the most recent actual or estimated data available from state departments of education. Where no data are available from a state education department, NEA Research has provided an estimate, which is identified by an asterisk in Series B, C, F, and H tables.

The State Department of Education Notes (page 61) contain additional information provided by state education departments to help explain data reported for their states.

*Rankings of the States, 1991* features revised figures for some public school data previously published in *Estimates of School Statistics, 1990-91,* another report of NEA Research, published in April 1991. State education agencies were invited to review their fall 1990 estimates and revise them for inclusion in this report. For this reason, data in Series B, C, F, and H may differ from those in *Estimates of School Statistics.*

The availability of data from federal government and other sources dictates the presence or absence of certain tables in this report. Statistics for full-time employment in higher education in 1989 presented in Series C are computed by the Bureau of the Census with a formula using hours worked by part-time employees.

Please note that tables featuring Average Daily Membership (ADM) do not contain values for the United States as a whole since seven states do not compute or provide estimates for their statewide ADM. Consequently, averages are not computed in those cases—this fact is reflected by an "NA" notation. Tables involving ADM data are B-5, B-6, H-14, and H-15.

Figures A through H illustrate historical trends in selected *Rankings* data, and a detachable centerfold is provided to help state affiliates and general users develop a school funding profile. Comparisons with neighboring states can be developed for any *Rankings* tables by using the last page of the detachable section.

Tables D-14 and D-15 feature data from the *Sales and Marketing Management Survey of Buying Power*, a copyrighted work. Reproduction of these tables is prohibited unless permission is obtained directly from Sales and Marketing Management, 633 Third Avenue, New York, New York 10017.

# Series A—Population

Tables in Series A provide information about the population of states and can serve as indicators of the relative demand for public education services or other public programs.

The level and change in total state population are featured in Tables A-1 through A-4. These tables help to identify patterns of growth or decline for each state and the resulting implications for staffing and financing public education institutions. Population density has been computed for Table A-12, while the number of births by state is the focus of A-10 and A-11.

School-age population data in Tables A-5 and A-6 focus directly on the consumers of public elementary and secondary education. Combining these figures with public school enrollment tables in Series B can indicate demand for and participation in public school services.

Tables A-7 through A-9 define the adult population within states. Changes in the size of adult and elderly age groups affect demand for public school programs and the degree to which funding for education faces competition from other public sector programs. These tables also can indicate the willingness of citizens within a state to support public education.

Figure A displays historical trends for two key groups--the school-age and retirement-age populations. The former indicates a potential demand for education and the latter a potential demand for health care services. Since 1979 the school-age group has declined relative to the age-65-and-over group from 10 percent greater to only 6 percent greater. With both services being heavily dependent upon public financing, competition for available tax dollars may increase (Tables A-6, A-8).

Bureau of the Census, *Statistical Abstract of the United States, 1990*, p. 21.

## Series B—Enrollment, Attendance, and Membership

Tables in Series B feature data on student participation in public elementary and secondary schools. The tables include current statistics on pupils enrolled and the change in enrollment over the previous year. These tables indicate change in relative demand for public school services and staff.

Alternative measures of public school participation also are included in this series. Average Daily Attendance (ADA) and Average Daily Membership (ADM) are presented in Tables B-4 through B-7 and differ from fall enrollment counts in that they present averages of pupil participation *year round*. Departments of education in seven states do not provide data for ADM, and these instances are identified as "NA" in Tables B-5 and B-6 and throughout other series as appropriate. Also, there are no U.S. totals or computed averages using ADM, as national figures for this measure cannot be considered to represent totals or averages for all states.

Table B-9 shows the percent change in the number of high school graduates over a ten-year period, useful in predicting demand for higher education services in future years.

Please see page 61 for additional information provided by the state education departments to help explain data reported for their states in Series B tables.

Percent change in total K-12 public school enrollment is displayed in Figure B. Declines that characterized the first half of the 1980s have reversed since 1985. Accommodating the increase has required and will continue to require increased physical and financial resources just to maintain a level measure of educational services (Table B-3).

**Figure B.** Percent Change: Fall Enrollment

**Tables**

B-1. Number of Basic Administrative Units (Operating Public School Districts), 1990-91
B-2. Public School Enrollment, Fall 1990
B-3. Percent Change in Public School Enrollment, Fall 1989 to Fall 1990
B-4. Average Daily Attendance in Public Schools, 1990-91
B-5. Average Daily Membership in Public Schools, 1990-91
B-6. Average Daily Attendance as Percent of Average Daily Membership, 1990-91
B-7. Average Daily Attendance as Percent of Fall Enrollment, 1990-91
B-8. Number of Public High School Graduates, 1990-91
B-9. Percent Change in Number of High School Graduates, 1980-81 to 1990-91

# Series C—Faculty

Personnel in local public schools and in public institutions of higher education are the focus of tables in Series C. Changes in the number of staff employed in education institutions as well as their levels of compensation reflect trends in enrollment, economy, and program priorities expressed by state residents.

The number of staff employed in public schools is featured in Table C-1. The statistics for full-time employment in higher education presented in Tables C-2 through C-4 have been computed by the Bureau of the Census with a formula using hours worked by part-time employees. Three tables of pupil load—pupils enrolled per teacher, pupils in ADA per teacher, and pupils in ADM per teacher—are presented in Tables C-6 through C-8.

Average salaries of public classroom teachers and total instructional staff are featured in C-10 through C-23. These average salary data are presented in "current" or unadjusted dollars and also in "constant" or inflation-adjusted dollars. These computations employ the Consumer Price Index for all Urban Consumers (CPI-U), converted to a school-year basis, using the 1980-81 school year as the base (1980-81 = 100.0).

The presentation of salary changes in constant dollar terms enables identification of salary increases attributable to inflation. The resulting picture for most states is a salary gain over the past decade far below what the public may intend or know of. As an advocacy tool, the use of these salary data can do much to dispel myths of huge jumps in the purchasing power of teacher salaries.

Please see page 61 for additional information provided by the state education departments to help explain data reported for their states in Series C tables.

Figure C traces the percent change in average salaries paid teachers from 1981 to 1991. Increases have ranged between 5 and 6 percent for the most recent five years. When adjusted for inflation, the average salary has increased by 22.0 percent over the decade (Tables C-15, C-16).

## Series D—General Financial Resources

*Total personal income* measures the overall economic activity within a specific geographic area. It is the aggregate income from *all* sources received by persons residing in a state, and it has a significant effect on the total income or financial resources available to governmental jurisdictions through taxation. This, in turn, affects the prospects for financing public education and other government services. State personal income is used throughout the tables in this report to gauge the ability and effort of states to generate funds for public programs, and it is considered by some to present a better method of comparison than the use of state population for per capita computations.

Tables D-1 and D-2 compare states on their total personal income and the percentage gain in each state. *Per capita personal income* provides more detail about the relative financial well-being of individuals within each state through the use of statewide population as a common denominator and is featured in Tables D-3 through D-6.

*Disposable personal income* represents the personal income of residents *minus* taxes and other required payments, such as fines, penalties, and fees. Disposable personal income reflects the amount of income remaining for expenditure on consumer goods, for example, and represents a different measure of "wealth" among states. Tables D-8 through D-10 feature *per capita* disposable personal income, or the amount of personal income for every person in each state, thereby providing some comparability across states for this measure.

Table D-11 compares the states on a measure of personal income geared more closely to the consumers of public education services—the number of pupils as measured in average daily attendance. Table D-12 shows the relative significance of government activity as it contributes to total personal income, by measuring personal income from government and government enterprises as a percent of the total. Income from farming activities is compared by state in Table D-13, while Tables D-14 and D-15 contain average household buying incomes and retail sales per household, measures similar to disposable personal income in their approximation of consumer spending power in each state.

Figure D shows the percent change in per capita personal income for years 1979 through 1989. Increases in excess of 10 percent from 1979 through 1981 have moderated in recent years to the 5 to 7 percent range. To a large extent personal income drives state tax systems. Sales and income tax collections respond rapidly to its changes. It is therefore a key indicator to watch in education finance planning (Table D-5).

**Figure D.** Percent Change: Per Capita Personal Income

# Series E—Governmental Revenue

Revenue of state and local governments, principally revenue generated through taxation, is the subject of the tables in Series E. These tables contain comparative information about the amounts and significance of selected tax sources by state, providing insight into the financial resources of government that are available for financing public education.

General revenue, own-source revenue, and tax collections are presented for state and local governments. Revenue data are expressed on a per capita basis or as a proportion of state personal income. The latter expression, found in Tables E-3, E-5, E-9, E-12, E-15, and E-16, indicates that for every $1,000 of personal income in a state, a certain amount of revenue (sales tax revenue, e.g.) is generated. This is referred to as the "tax effort" of government units and also can be computed for expenditure categories, as shown in Series G and H.

Tables E-13 through E-16 feature state revenue from general sales and from individual income taxes, expressed on a per capita basis and per $1,000 of state personal income. Please note that low amounts appear for several states, indicating that those taxes are restricted in some fashion, such as the income tax on individuals in New Hampshire. Please consult references on state tax characteristics for clarifying information.

The historical trend of state and local tax collections per $1,000 of personal income is shown in Figure E for 1983 through 1989. For all seven years, combined total collections remained close to the $105 mark. Additionally, state and local shares show little annual variation. Given these constant relationships, it is easy to see why economic growth is the key to substantive improvement in education finance (Tables E-5, E-12).

**Figure E.** State and Local Taxes per $1,000 of Personal Income

**Tables**

E-1. Per Capita Total General Revenue of All State and Local Governments, 1988-89
E-2. Per Capita General Revenue of State and Local Governments from Own Sources, 1988-89

# Series F—School Revenue

Series F tables compare states on their sources of public school revenue. Funds received by public school districts from federal, state, and local sources are listed for each state and are expressed in relation to the number of pupils in each state and to the state's personal income and according to the percentage distribution across the three government sources.

Tables F-3 and F-4 examine each state's relative position with regard to school revenues per $1,000 of state personal income. These measures, as with the examples in Series E, make it easier to compare the effort of government units to provide financial support for public school programs through measurement of that support with the common denominator of personal income.

Please note that the school revenue data contained in Series F tables update those featured in *Estimates of School Statistics, 1990-91*, published in April. State education departments have the option of revising their estimated data for inclusion in *Rankings*.

Please see page 61 for additional information provided by the state education departments to help explain data reported for their states in Series F tables.

Figure F displays school revenues by source--state, local, and federal. Throughout the past ten years state and local governments have each provided between 40 and 50 percent of the total. The federal contribution has drifted downward, from near 9 percent for 1981 to 6.2 percent for 1991 (Tables F-6, F-8, F-10).

# Series G—Government Expenditures

State and local government spending characteristics provide useful comparative information about the resources, needs, and priorities for public services. Expenditures for government programs vary across states for many reasons, and state-by-state comparisons should be made while keeping them in mind—demographic, economic, and political factors are but a few.

Tables in Series G describe spending by state governments and by state and local governments combined. Expenditure data are expressed on a per capita basis, allowing closer comparison of the differences in levels and objects of state and local government spending, as well as their positions relative to the U.S. average. Use of state personal income in selected tables provides an opportunity to compare the relative "effort" of government units to fund program areas, including public education.

Per capita expenditures of state and local governments are shown in Figure G. General expenditures increased by $1,578 over the decade while capital outlay and debt increased $411. Nevertheless, the percentage increase for capital outlay and debt was greater--156 percent compared to 106 percent. Education expenditures are included in these totals (Tables G-3, G-10, G-11).

**Figure G.** Per Capita State and Local Government Expenditures

## Tables

G-1. Per Capita Total General Expenditures of State Governments for all Functions, 1988-89
G-2. State Government General Expenditures in 1988-89 per $1,000 of Personal Income in 1989
G-3. Per Capita Total General Expenditures of State and Local Governments, 1988-89
G-4. State and Local Government General Expenditures in 1988-89 per $1,000 of Personal Income in 1989
G-5. Per Capita Expenditures of State and Local Governments for Public Welfare, 1988-89
G-6. Per Capita Expenditures of State and Local Governments for Health and Hospitals, 1988-89
G-7. Per Capita Expenditures of State and Local Governments for Police Protection, 1988-89
G-8. Per Capita Expenditures of State and Local Governments for Fire Protection, 1988-89
G-9. Per Capita Expenditures of State and Local Governments for Highways, 1988-89
G-10. Per Capita Expenditures of State and Local Governments for Capital Outlay, 1988-89
G-11. Per Capita Expenditures of State and Local Governments for Interest on Debt, 1988-89

# Series H—School Expenditures

Expenditures for elementary and secondary schools and for higher education can serve as indicators of state and local government "effort" to fund these services. Measures used to compare states on spending for education include current expenditures per pupil in Average Daily Attendance (ADA) or Average Daily Membership (ADM). School expenditure data are also displayed in relation to state population and state personal income and as percentages of total state expenditures or as proportions of national averages.

Expenditure data are shown for elementary and secondary schools separately and in combination with higher education. Again, knowledge about public education systems and their funding characteristics is required to make fair comparisons of state-local government financial support of education relative to that found in other states. See page 61 for additional information provided by the state education departments.

Combined per capita education expenditures of state and local governments are shown in Figure H. Beginning in 1985, expenditures for elementary and secondary education increased in relation to higher education. Knowing that the costs of higher education have not decreased, it can be surmised that a large portion of increased costs has been passed on to students in the form of tuition increases (Tables H-7, H-8).

**Figure H.** Per Capita State and Local Education Expenditures

**Tables**

# State Department of Education Notes

**Alaska**

Revenue and expenditure data derived in part from *Alaska Public School District Annual Financial Reports, Fiscal Year 1990* and U.S. Department of Education, National Center for Education Statistics, *Common Core of Data*.

Amounts for interest on school debt include payment of both principal and interest.

**Arkansas**

Increase in state revenue due to increases in the following areas: teacher retirement, $5.8 million; minimum foundation program aid, $35 million; public school employees' insurance, $7 million; workers compensation, $1.8 million; and desegregation, $27 million.

**Michigan**

Other nonsupervisory instructional staff excludes teacher aides and other aides.

**Mississippi**

The total school district count does not include four agricultural high schools as legally they are not school districts; however, their data are included in the enrollment figures.

**Nevada**

Average reported salaries do not include a 9.5 percent pickup of employees' retirement contributions by local school districts.

Significant increases in nonrevenue receipts and capital outlay reflect large bond issues and building programs.

**New Hampshire**

Interest on school debt contains principal and interest amounts.

**Oregon**

Salaries include a 6 percent pickup of employee portion of retirement contribution by employer.

**Washington**

The interest on school debt does not include capital projects fund interest expenditures in FY1989-90 or for FY1990-91. The amount was probably around $1.5 million in FY1989-90 and $3.0 million in FY 1990-91.

Bond principal expenditures and associated student body revenues and expenditures are excluded from the report.

Federal food reimbursements were not deducted from food service expenditures.

Educational service district revenues were not included in this report. Only educational service district administrative expenditures are included. Expenditures for other programs run by educational service districts are not included in this report.

# Glossary

**Average Daily Attendance, ADA:** Average of pupils attending when schools are actually in session.

**Average Daily Membership, ADM:** An average of the pupils belonging, those present plus those absent, when schools are actually in session.

**Basic Administrative Unit:** The local school district; the unit for the operation of elementary and secondary schools or for contracting for school services.

**Capital Outlay:** An expenditure that results in the acquisition of fixed assets or additions to fixed assets, which are presumed to have benefits for more than one year. It is an expenditure for land or existing buildings, improvements of grounds, construction of buildings, additions to buildings, remodeling of buildings or initial, additional, and replacement equipment.

**Coefficient of Variation, CV:** The standard deviation expressed as a percent of the mean. Used to compare standard deviations of varying groups of data.

**Current Expenditures:** All amounts spent at all levels of administration—state, intermediate, and local—for public elementary and secondary schools for administration, instructional services, plant operation and maintenance, fixed charges, and other school services (attendance, health services, transportation, food services, etc.). Includes the cost of operating the state department of education and the intermediate (county) departments of education; employers' (state, intermediate, and local) contributions to retirement systems and/or Social Security on behalf of public school employees; and federal, state, and local funds to cover deficits (gross expenditure less sales) of school lunch and milk programs.

**Debt:** The major portion of all state and local government debt is long-term indebtedness. A substantial portion of such long-term debt is nonguaranteed debt, i.e., obligations payable solely from pledged earnings of specific activities or facilities, from special assessments, or from specific nonproperty taxes.

**Education:** The provision or support of schools and other education facilities and services.

**Effective Buying Income:** Same as disposable personal income; is obtained by deducting from personal income direct personal taxes and certain other nontax payments to government. The personal taxes deducted include federal, state, and local income taxes, estate and gift taxes, and miscellaneous licenses and permits. Property taxes are not deducted.

**Effort:** A measure that relates the capacity to support public schools (defined as the personal income of the residents of the state) to the revenues obtained, or expenditures made, on behalf of public schools. The latest available personal income data determine the school year for which school revenues and expenditures are chosen for comparison. Personal income for the year shown would be available to pay school taxes or allay school expenditures in that school year.

**Enrollment:** A cumulative count of the number of pupils registered during the entire school year. New entrants are added, but those leaving are not subtracted.

**Expenditures:** All amounts of money paid out by a government—net of recoveries and other correcting transactions—other than for retirement of debt, investment in securities, extension of credit, or as agency transactions. Expenditures include only external transactions of a government and exclude noncash transactions, such as the provision of perquisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments involved.

**Fall Enrollment:** The count of the pupils registered in the fall of the school year, usually October.

**Fire Protection:** Comprises fire-fighting and fire-protection activities of local governments.

**Full-Time Equivalent Employment:** A computed statistic representing the number of full-time employees that could have been employed if the reported number of hours worked by part-time employees had been worked by full-time employees. This statistic is calculated separately for each function of a government by dividing the "part-time hours paid" by the standard number of hours for full-time employees in the particular government and then adding the resulting quotient to the number of full-time employees.

**Functions:** Public purposes served by governmental activities (education, highways, public welfare, etc.). Expenditures for each function include amounts for all types of expenditures serving the purpose concerned.

**General Expenditures:** All expenditures of a government other than utility expenditures, liquor store expenditures, and insurance trust expenditures.

**General Revenue:** All revenue of a government except the kinds of revenue classified as utility revenue, liquor store revenue, and insurance trust revenue. All tax collections, even if designated for insurance trust or local utility purposes, are classified under general revenue.

**General Sales Taxes:** Sales or gross receipts taxes that are applicable, with only specified exceptions, to all types of goods and services or all gross income, whether at a single or at classified rates.

**Health:** Health services, other than hospital care, including health research, clinics, nursing, immunization, and other categorical, environmental, and general public health activities. School health services provided by health agencies (rather than school agency) are included.

**Highways:** Streets, highways, and structures necessary for their use; street lighting; snow and ice removal; toll highway and bridge facilities; and ferries.

**Higher Education:** Includes facilities and activities of all education institutions beyond the high school level operated by state or local governments, except that agricultural experiment stations and agricultural extension services are classified under natural resources, and university-operated hospitals serving the public are classed under hospitals.

**Hospitals:** Establishment and operation of hospital facilities, provision of hospital care, and support of other public or private hospitals.

**Household:** A unit that includes all persons occupying a house, apartment, or room regarded as a dwelling unit, excluding group quarters such as dormitories.

**Individual Income Tax:** Taxes on individuals measured by net income and taxes imposed on special types of income (e.g., interest, dividends, and income from intangibles).

**Instructional Staff:** Number of positions, not the number of different individuals occupying the positions during the school year. In local schools includes all public elementary and secondary (junior and senior high) day school positions (or full-time equivalents) that are in the nature of teaching or in the improvement of the teaching-learning situation. Includes consultants or supervisors of instruction, principals, teachers, guidance personnel, librarians, psychological personnel, and other instructional staff. Excludes attendance personnel, health services personnel, clerical personnel, and junior college staff. In institutions of higher education includes those engaged in teaching and related academic research in junior colleges, colleges, and universities, including those in hospitals, agricultural experiment stations, and farms.

**Interest on Debt:** Annual expenditures to pay interest only on long-term debt.

**Live Births:** Number of births in the United States.

**Mean:** The arithmetic average of the data.

**Median:** The middle number in a group when data are arranged in numeric sequence.

**Noninstructional Staff:** In local schools includes administrative and clerical personnel, plant operation and maintenance employees, bus drivers, and lunchroom, health, and recreational personnel engaged by school systems. In institutions of higher education includes cafeteria, clerical, and custodial workers in colleges and universities, hospitals, agricultural experiment stations, and farms.

**Personal Income:** State personal income is the current income received by residents of the states from all sources, including transfers from government and business, but excluding transfers among persons. It is a before-tax measure. The total includes both monetary and nonmonetary income of individuals and income received in kind. It also includes the investment income of nonprofit institutions serving individuals as well as the investment income of private trust funds and private noninsured welfare funds.

**Police Protection:** Preservation of law and order and traffic safety. Includes highway police patrols, crime prevention activities, police communications, detention and custody of persons awaiting trial, traffic safety, vehicular inspection, and the like.

**Property Taxes:** Taxes conditioned on ownership of property and measured by its value. Includes both general property taxes (i.e., relating to property as a whole, real and personal, tangible or intangible, whether taxed at a single rate or at classified rates) and special property taxes (i.e., on selected types of property, such as motor vehicles or certain or all tangibles, subject to rates that are not directly related to rates applying to general property taxation).

**Public Welfare:** Support of and assistance to eligible persons contingent upon their need. Excludes pensions to former employees and other benefits not contingent on need. Expenditures under this heading include cash assistance payments directly to needy persons under categorical and other welfare programs; vendor payments made directly to private purveyors for medical care, burials, and other services provided under welfare programs; welfare institutions; and any intergovernmental or other

direct expenditures for welfare purposes. Any services provided directly by the government through its hospital and health agencies are classed under those headings.

**Range:** The difference between the highest and lowest values in a group of data.

**Resident Population:** In addition to those who are residents of an area, also includes armed forces personnel who are stationed in the area.

**Revenue:** Revenue receipts for public school purposes from LOCAL, intermediate, and other sources include all funds for direct expenditures by local and intermediate districts for school services, for the operation of intermediate departments of education, for employer contributions to retirement systems and/or Social Security on behalf of public school employees, for the purchase of materials for distribution of local school districts, etc. Includes net receipts from revolving funds or clearing accounts only when such funds are available for general expenditure by the local board of education. Includes gifts and tuition and fees received from patrons.

Revenue receipts from STATE sources include all funds for the operation of the state department of education, for state (employer) contributions to retirement systems and/or Social Security on behalf of school employees, for grants in aid to intermediate and local school districts for school purposes (including funds available from state bond issues for such grants and the costs of textbooks, buses, supplies, etc., purchased by the state for distribution to local school districts), for the payment of interest on state bonds issued to provide grants to local school districts, and all other state revenue for public school purposes. Money collected by the state as an agent of a lesser unit and turned over in like amounts to that unit is not included.

Revenue receipts from FEDERAL sources include money distributed from the federal treasury either directly to local school districts or through the state and county, including grants for vocational education, for aid to federally affected areas, for National Defense Education Act programs, for school lunch and milk programs, for educating American Indians in local public schools, and money derived from federal forest reserves and federal oil royalties. (No special effort is made to include amount of grants in kind, for example, operation of the school lunch program.)

**Revenue from Own Sources:** All revenue of a government (taxes and other) except intergovernmental.

**School-Age Population:** Population age 5 through 17, inclusive (excluding armed forces abroad).

**Standard Deviation, SDEV:** A statistical technique measuring the extent to which data vary from their mean. Used to indicate the relative dispersion of individual items.

**Taxes:** Compulsory contributions exacted by a government for public purposes, except employee and employer assessments for retirement and social insurance purposes, which are classed as insurance trust revenue. All tax revenue is classified under general revenue and comprises amounts received (including interest and penalties but excluding refunds) from taxes imposed by the recipient government. Amounts received by a government from a tax it imposes are counted as tax revenue of that government, even though initially collected by another government; however, any amounts retained are treated as tax revenue of the collecting government. Tax amounts subsequently distributed to other governments are classified as intergovernmental transactions.

**Total Revenue Receipts:** Includes all revenue receipts available for expenditure for current expenses, capital outlay, and debt service for public schools, including all appropriations from general funds of federal, state, county, and local governments; receipts from taxes levied for school purposes; income from permanent school funds and endowments; income from leases of school lands; interest on bank deposits; tuition; gifts; etc. Amounts that increase the school indebtedness or that represent exchange of school property for money are excluded.

# Foreword

Interest in education improvement and renewal, which heightened during the early 1980s, continues to capture the attention of researchers, policymakers, and the public. While much has been done to enhance public education programs and services, much work and many challenges remain. In this setting, NEA Research offers *Rankings of the States, 1992* to its state and local affiliates as a tool for use throughout this period of public school reform.

*Rankings of the States* provides state-level data on an array of topics relevant to the complex enterprise of public education. State-by-state figures on government and school financing, state demographics, and public school personnel permit a statistical assessment of the scope of public education and an identification of emerging trends in key areas.

The *Rankings* report enjoys a long history of use by affiliates of the NEA as well as by planners and policymakers in other organizations. It has, since the 1960s, presented facts and figures useful in determining ways in which states vary from one another or from national averages on selected statistics and in explaining how the reported data reflect social and economic characteristics and changes. Of course, no one table or set of tables can tell the entire story of a state's education offerings. One must consider a state's tax system, its provision of other public services, the characteristics of its population, and more. It is therefore unwise to draw conclusions solely from the tables in this report, and the reader is urged to supplement these rank-ordered data with specific information about state and local activities and services related to public education.

State department of education staff who contributed to this report deserve much credit for the current public school data it presents, as do the state education associations across the country.

*NEA Research*

*September 1992*

# Technical Notes

*Rankings of the States, 1992* contains rank-ordered statistics for the fifty states and the District of Columbia. All state data are ranked beginning with the largest figure. When the values of two or more states are the same, they are assigned the same rank, with the appropriate number resumed with the next state in rank. In this case, they appear in rank order before rounding.

The education data in *Rankings* are the most recent actual or estimated data available from state departments of education. Where no data are available from a state education department, NEA Research has provided an estimate, which is identified by an asterisk in Series B, C, F, and H tables.

The State Department of Education Notes (page 61) contain additional information provided by state education departments to help explain data reported for their states.

*Rankings of the States, 1992* features revised figures for some public school data previously published in *Estimates of School Statistics, 1991-92*, another report of NEA Research, published in March 1992. State education agencies were invited to review their fall 1991 estimates and revise them for inclusion in this report. For this reason, data in Series B, C, F, and H may differ from those in *Estimates of School Statistics*.

The availability of data from federal government and other sources dictates the presence or absence of certain tables in this report. Statistics for full-time employment in higher education in 1990 presented in Series C are computed by the Bureau of the Census with a formula using hours worked by part-time employees.

Please note that tables featuring Average Daily Membership (ADM) do not contain values for the United States as a whole since seven states do not compute or provide estimates for their statewide ADM. Consequently, averages are not computed in those cases—this fact is reflected by an "NA" notation. Tables involving ADM data are B-5, B-6, H-14, and H-15.

Figures A through H illustrate historical trends in selected *Rankings* data, and a detachable centerfold is provided to help state affiliates and general users develop a school funding profile. Comparisons with neighboring states can be developed for any *Rankings* tables by using the last page of the detachable section.

Tables D-14 and D-15 feature data reprinted by permission of Sales & Marketing Management, copyright: *S&MM Survey of Buying Power*, August 19, 1991.

# Series A—Population

Tables in Series A provide information about the population of states and can serve as indicators of the relative demand for public education services or other public programs.

The level and change in total state population are featured in Tables A-1 through A-4. These tables help to identify patterns of growth or decline for each state and the resulting implications for staffing and financing public education institutions. Population density has been computed for Table A-12, while the number of births by state is the focus of A-10 and A-11.

School-age population data in Tables A-5 and A-6 focus directly on the consumers of public elementary and secondary education. Combining these figures with public school enrollment tables in Series B can indicate demand for and participation in public school services.

Tables A-7 through A-9 define the adult population within states. Changes in the size of adult and elderly age groups affect demand for public school programs and the degree to which funding for education faces competition from other public sector programs. These tables also can indicate the propensity of citizens within a state to support public education.

Figure A displays historical trends for two key groups--the school-age and retirement-age populations. The former indicates a potential demand for education and the latter a potential demand for health care services. Since 1980 the school-age group has declined relative to the age-65-and-over group from 9.6 percent greater to only 6 percent greater. With both services being heavily dependent upon public financing, competition for available tax dollars may increase (Tables A-6, A-8).

## Series B—Enrollment, Attendance, and Membership

Tables in Series B feature data on student participation in public elementary and secondary schools. The tables include current statistics on pupils enrolled and the change in enrollment over the previous year. These tables indicate change in relative demand for public school services and staff.

Alternative measures of public school participation also are included in this series. Average Daily Attendance (ADA) and Average Daily Membership (ADM) are presented in Tables B-4 through B-7 and differ from fall enrollment counts in that they present averages of pupil participation *year round*. Departments of education in seven states do not provide data for ADM, and these instances are identified as "NA" in Tables B-5 and B-6 and throughout other series as appropriate. Also, there are no U.S. totals or computed averages using ADM, as national figures for this measure cannot be considered to represent totals or averages for all states.

Table B-9 shows the percent change in the number of high school graduates over a ten-year period, useful in predicting demand for higher education services in future years.

Please see page 61 for additional information provided by the state education departments to help explain data reported for their states in Series B tables.

Percent change in total K-12 public school enrollment is displayed in Figure B. Declines that characterized the first half of the 1980s have reversed since 1985. Accommodating the increase has required and will continue to require increased physical and financial resources just to maintain a level measure of educational services (Table B-3).

**Figure B.** Percent Change: Fall Enrollment

**Tables**

B-1. Number of Public School Districts (operating), 1991-92
B-2. Public School Enrollment, Fall 1991
B-3. Percent Change in Public School Enrollment, Fall 1990 to Fall 1991
B-4. Average Daily Attendance in Public Schools, 1991-92
B-5. Average Daily Membership in Public Schools, 1991-92
B-6. Average Daily Attendance as Percent of Average Daily Membership, 1991-92
B-7. Average Daily Attendance as Percent of Fall Enrollment, 1991-92
B-8. Number of Public High School Graduates, 1991-92
B-9. Percent Change in Number of High School Graduates, 1981-82 to 1991-92

# Series C—Faculty

Personnel in local public schools and in public institutions of higher education are the focus of tables in Series C. Changes in the number of staff employed in education institutions as well as their levels of compensation reflect trends in enrollment, economy, and program priorities expressed by state residents.

The number of staff employed in public schools is featured in Table C-1. The statistics for full-time employment in higher education presented in Tables C-2 through C-4 have been computed by the Bureau of the Census with a formula using hours worked by part-time employees. Three tables of pupil load—pupils enrolled per teacher, pupils in ADA per teacher, and pupils in ADM per teacher—are presented in Tables C-6 through C-8.

Average salaries of public classroom teachers and total instructional staff are featured in C-10 through C-23. These average salary data are presented in "current" or unadjusted dollars and also in "constant" or inflation-adjusted dollars. These computations employ the Consumer Price Index for all Urban Consumers (CPI-U), converted to a school-year basis, using the 1981-82 school year as the base (1981-82 = 100.0).

The presentation of salary changes in constant dollar terms enables identification of salary increases attributable to inflation. The resulting picture for most states is a salary gain over the past decade far below what the public may intend or know of. As an advocacy tool, the use of these salary data can do much to dispel myths of huge jumps in the purchasing power of teacher salaries.

Please see page 61 for additional information provided by the state education departments to help explain data reported for their states in Series C tables.

Figure C traces the percent change in average salaries paid teachers from 1982 to 1992. While increases ranged between 5 and 6 percent in recent years, this year's increase was only 3.1 percent. When adjusted for inflation, the average salary has increased by 21.2 percent over the decade (Tables C-15, C-16).

## Series D—General Financial Resources

*Total personal income* measures the overall economic activity within a specific geographic area. It is the aggregate income from *all* sources received by persons residing in a state, and it has a significant effect on the total income or financial resources available to governmental jurisdictions through taxation. This, in turn, affects the prospects for financing public education and other government services. State personal income is used throughout the tables in this report to gauge the ability and effort of states to generate funds for public programs, and it is considered by some to present a better method of comparison than the use of per capita computations.

Tables D-1 and D-2 compare states on their total personal income and the percentage gain in each state. *Per capita personal income* provides more detail about the relative financial well-being of individuals within each state through the use of statewide population as a common denominator and is featured in Tables D-3 through D-6.

*Disposable personal income* represents the personal income of residents *minus* taxes and other required payments, such as fines, penalties, and fees. Disposable personal income reflects the amount of income remaining for expenditure on consumer goods, for example, and represents a different measure of "wealth" among states. Tables D-8 through D-10 feature *per capita* disposable personal income, or the amount of personal income for every person in each state, thereby providing some comparability across states for this measure.

Table D-11 compares the states on a measure of personal income geared more closely to the consumers of public education services—the number of pupils as measured in average daily attendance. Table D-12 shows the relative significance of government activity as it contributes to total personal income, by measuring personal income from government and government enterprises as a percent of the total. Income from farming activities is compared by state in Table D-13, while Tables D-14 and D-15 contain average household buying incomes and retail sales per household, measures similar to disposable personal income in their approximation of consumer spending power in each state.

Figure D shows the percent change in per capita personal income for years 1980 through 1990. Increases in excess of 10 percent from 1980 through 1981 have moderated in recent years to the 5 to 7 percent range. To a large extent personal income drives state tax systems. Sales and income tax collections respond rapidly to its changes. It is therefore a key indicator to watch in education finance planning (Table D-5).

**Figure D.** Percent Change: Per Capita Personal Income

# Series E—Governmental Revenue

Revenue of state and local governments, principally revenue generated through taxation, is the subject of the tables in Series E. These tables contain comparative information about the amounts and significance of selected tax sources by state, providing insight into the financial resources of government that are available for financing public education.

General revenue, own-source revenue, and tax collections are presented for state and local governments. Revenue data are expressed on a per capita basis or as a proportion of state personal income. The latter expression, found in Tables E-3, E-5, E-9, E-12, E-15, and E-16, indicates that for every $1,000 of personal income in a state, a certain amount of revenue (sales tax revenue, e.g.) is generated. This is referred to as the "tax effort" of government units and also can be computed for expenditure categories, as shown in Series G and H.

Tables E-13 through E-16 feature state revenue from general sales and from individual income taxes, expressed on a per capita basis and per $1,000 of state personal income. Please note that low amounts appear for several states, indicating that those taxes are restricted in some fashion, such as the income tax on individuals in New Hampshire. Please consult references on state tax characteristics for clarifying information.

The historical trend of state and local tax collections per $1,000 of personal income is shown in Figure E for 1983 through 1990. For all eight years, combined total collections remained close to the $105 mark. Additionally, state and local shares show little annual variation. Given these constant relationships, it is easy to see why economic growth is the key to substantive improvement in education finance (Tables E-5, E-12).

# Framework for State School Finance Profile

(To obtain your state profile, fill in the blanks with the appropriate *Rankings* data.)

**State:** _____

| | Rank | State | U.S. | Table |
|---|---|---|---|---|
| **DEMOGRAPHICS** | | | | |
| Resident population in 1990 (in thousands) | -- | --,--- | 248,710 | (A-1) |
| Percent age 5 to 17 | -- | --.-% | 18.2% | (A-6) |
| Percent age 18 and over | -- | --.-% | 74.4% | (A-7) |
| Percent age 65 and over | -- | --.-% | 12.6% | (A-8) |
| **ECONOMY** | | | | |
| Personal income in 1990 | | | | |
| Total (in millions) | -- | $---,--- | $4,662,698 | (D-1) |
| Per capita | -- | $--,--- | $18,691 | (D-3) |
| As % of national average | -- | ---.-% | 100% | (D-4) |
| Per pupil in ADA | -- | $---,--- | $124,219 | (D-11) |
| **GOVERNMENT REVENUE** | | | | |
| State and local general revenue from own sources in 1989-90 | | | | |
| Per capita | -- | $-,--- | $2,866 | (E-2) |
| Per $1,000 of personal income in 1990 | -- | --- | 153 | (E-3) |
| State and local tax revenue in 1989-90 | | | | |
| Per capita | -- | $-,--- | $2,017 | (E-4) |
| Per $1,000 of personal income in 1990 | -- | --- | 108 | (E-5) |
| Tax revenue by major source in 1989-90 | | | | |
| Per capita | | | | |
| Local property tax | -- | $-,--- | $ 602 | (E-7) |
| State individual income tax | -- | --- | 387 | (E-13) |
| State general sales tax | -- | --- | 402 | (E-14) |
| Per $1,000 of personal income in 1990 | | | | |
| State and local property tax | -- | $ -- | $ 33 | (E-9) |
| State individual income tax | -- | -- | 21 | (E-15) |
| State general sales tax | -- | -- | 21 | (E-16) |

## Framework for State School Finance Profile (cont.)

| | Rank | State | U.S. | Table |
|---|---|---|---|---|
| **GOVERNMENT EXPENDITURE** | | | | |
| State and local general expenditures in 1989-90 | | | | |
| Per capita | -- | $ --,--- | $3,343 | (G-3) |
| Per $1,000 of personal income in 1990 | -- | --- | 179 | (G-4) |
| State and local expenditures by major function in 1989-90 | | | | |
| Per capita | | | | |
| Local public schools | -- | $ -,--- | $ 812 | (H-8) |
| Public welfare | -- | --- | 431 | (G-5) |
| Health and hospitals | -- | --- | 300 | (G-6) |
| Police protection | -- | --- | 123 | (G-7) |
| Fire protection | -- | --- | 53 | (G-8) |
| Highways | -- | -,--- | 246 | (G-9) |
| **SCHOOL FINANCE EFFORT** | | | | |
| School revenue in 1989-90 | | | | |
| Per $1,000 of personal income in 1990 | -- | $ -- | $45 | (F-3) |
| School expenditures in 1989-90 | | | | |
| Per $1,000 of personal income in 1990 | -- | $ -- | $40 | (H-13) |
| **SCHOOL FINANCES FOR CURRENT SCHOOL YEAR** | | | | |
| School revenue in 1991-92 | | | | |
| Per pupil in ADA | -- | $ -,--- | $6,070 | (F-2) |
| Percent of total from | | | | |
| Local | -- | --.-% | 45.7% | (F-6) |
| State | -- | --.-% | 47.9% | (F-8) |
| School expenditures in 1991-92 | | | | |
| Per pupil in ADA | -- | $ -,--- | $5,466 | (H-11) |

# Series F—School Revenue

Series F tables compare states on their sources of public school revenue. Funds received by public school districts from federal, state, and local sources are listed for each state and are expressed in relation to the number of pupils in each state and to the state's personal income and according to the percentage distribution across the three government sources.

Tables F-3 and F-4 examine each state's relative position with regard to school revenues per $1,000 of state personal income. These measures, as with the examples in Series E, make it easier to compare the effort of government units to provide financial support for public school programs through measurement of that support with the common denominator of personal income.

Please note that the school revenue data contained in Series F tables update those featured in *Estimates of School Statistics, 1991-92*, published in March. State education departments have the option of revising their estimated data for inclusion in *Rankings*.

Please see page 61 for additional information provided by the state education departments to help explain data reported for their states in Series F tables.

Figure F displays school revenues by source--state, local, and federal. Throughout the past ten years state and local governments have each provided between 40 and 50 percent of the total. The federal contribution has drifted downward, from 7.4 percent for 1982 to 6.4 percent for 1992 (Tables F-6, F-8, F-10).

# Series G—Government Expenditures

State and local government spending characteristics provide useful comparative information about the resources, needs, and priorities for public services. Expenditures for government programs vary across states for many reasons, and state-by-state comparisons should be made while keeping them in mind—demographic, economic, and political factors are but a few.

Tables in Series G describe spending by state governments and by state and local governments combined. Expenditure data are expressed on a per capita basis, allowing closer comparison of the differences in levels and objects of state and local government spending, as well as their positions relative to the U.S. average. Use of state personal income in selected tables provides an opportunity to compare the relative "effort" of government units to fund program areas, including public education.

Per capita expenditures of state and local governments are shown in Figure G. General expenditures increased by 106 percent over the decade while capital outlay and debt increased 145 percent. Moreover, the ratio of general expenditures to capital outlay and debt decreased from 5.4 to 1 to 4.6 to 1. Education expenditures are included in these totals (Tables G-3, G-10, G-11).

**Figure G.** Per Capita State and Local Government Expenditures

**Tables**

G-1. Per Capita Total General Expenditures of State Governments for All Functions, 1989-90
G-2. State Government General Expenditures in 1989-90 per $1,000 of Personal Income in 1990
G-3. Per Capita Total General Expenditures of State and Local Governments, 1989-90
G-4. State and Local Government General Expenditures in 1989-90 per $1,000 of Personal Income in 1990
G-5. Per Capita Expenditures of State and Local Governments for Public Welfare, 1989-90
G-6. Per Capita Expenditures of State and Local Governments for Health and Hospitals, 1989-90
G-7. Per Capita Expenditures of State and Local Governments for Police Protection, 1989-90
G-8. Per Capita Expenditures of State and Local Governments for Fire Protection, 1989-90
G-9. Per Capita Expenditures of State and Local Governments for Highways, 1989-90
G-10. Per Capita Expenditures of State and Local Governments for Capital Outlay, 1989-90
G-11. Per Capita Expenditures of State and Local Governments for Interest on Debt, 1989-90

# Series H—School Expenditures

Expenditures for elementary and secondary schools and for higher education can serve as indicators of state and local government "effort" to fund these services. Measures used to compare states on spending for education include current expenditures per pupil in Average Daily Attendance (ADA) or Average Daily Membership (ADM). School expenditure data are also displayed in relation to state population and state personal income and as percentages of total state expenditures or as proportions of national averages.

Expenditure data are shown for elementary and secondary schools separately and in combination with higher education. Again, knowledge about public education systems and their funding characteristics is required to make fair comparisons of state-local government financial support of education relative to that found in other states. See page 61 for additional information provided by the state education departments.

Combined per capita education expenditures of state and local governments are shown in Figure H. Since 1980, expenditures for elementary and secondary education as well as higher education have almost doubled. The ratio of elementary and secondary expenditures to higher education expenditures has remained constant at 2.7 to 1 (Tables H-7, H-8).

**Figure H.** Per Capita State and Local Education Expenditures

**Tables**

H-1. Per Capita State Government Expenditures for All Education, 1989-90

# State Department of Education Notes

| | |
|---|---|
| **Alaska** | Large increase in other nonsupervisory instructional staff due to inclusion of counselors, librarians, and curriculum specialists. |
| | Alaska 1991-92 revenue receipts and 1990-91 and 1991-92 current expenditure data from U.S. Department of Education, National Center for Education Statistics, Common Core of Data. |
| **Connecticut** | Revenue data based upon projected growth of 7 percent. |
| **Delaware** | Numbers of graduates were adjusted to follow NEA definitions. |
| | Revenue data adjusted to correct for double counting of tuition for special education students. |
| **District of Columbia** | Revenues and expenditures for FY1991-92 exclude D.C. payment of teachers retirement to the Retirement Board. |
| **Hawaii** | High school graduates include 9,114 students who received diplomas and 405 who received a certificate of completion. |
| **Indiana** | Increase in 1991 local revenue receipts due to reassessment. |
| **Iowa** | Beginning in 1990-91 the number of high school graduates includes recipients of regular high school diplomas only. All other categories of "completers" are excluded. |
| **Kansas** | The Kansas State Board of Education includes three separate forms of compensation in its average teacher salary: teaching salary, any supplemental salary, and fringe benefits. |
| **Louisiana** | Enrollment and teacher data include pre-kindergarten through 12 plus special education. |
| **Maryland** | Includes 864 special education program completers in the 1991 graduate count. Local revenues reflect payments for food service. Current expenditures include all food service. |
| **Nevada** | Average reported salaries DO NOT include a 9.25 percent pickup of employees' retirement contributions by local school districts. Teacher salary with pickup is $36,989. |
| **North Dakota** | The 1991 and 1992 fiscal data include all funds within school districts in addition to regional cooperative special education and vocational education programs. |

| | |
|---|---|
| **Oregon** | Salaries include a 6 percent pickup of employee portion of retirement contribution by employer. |
| **Pennsylvania** | Full-time equivalent enrollment not available prior to 1990-91. |
| | Average salaries calculated for full-time only. |
| **Rhode Island** | Method for calculating average salaries has been changed. Extra compensation for department heads, coaching salaries, student club activities, and extra duties is no longer included. |
| **South Carolina** | ADA and ADM figures include kindergarten students reported at half count. |
| | Teacher average salaries reported since 1988 include contract amount plus incentive. |
| **Virginia** | Salary data provided by the Virginia Education Association. |
| **Washington** | 1990-91 and 1991-92 enrollments include students served in K-12 programs in state handicapped and correctional facilities. |
| | The staff counts for 1990-91 and 1991-92 exclude staff involved in programs which do not service K-12. |
| | Interest on school debt does not include capital projects fund interest expenditures in FY1990-91 and 1991-92. |
| | Bond principal expenditures and associated student body revenues and expenditures are excluded from the report. |
| | Federal food reimbursements are not deducted from food service expenditures. |
| | Educational service district revenues are not included. Educational service district administrative expenditures are included. Expenditures for other programs run by educational service districts are excluded. |
| | Current expenditures for other programs for FY1991-92 do not include expenditures for vocational-technical institutes. |

# Glossary

**Average Daily Attendance, ADA:** Average of pupils attending when schools are actually in session.

**Average Daily Membership, ADM:** An average of the pupils belonging, those present plus those absent, when schools are actually in session.

**Capital Outlay:** An expenditure that results in the acquisition of fixed assets or additions to fixed assets, which are presumed to have benefits for more than one year. It is an expenditure for land or existing buildings, improvements of grounds, construction of buildings, additions to buildings, remodeling of buildings or initial, additional, and replacement equipment.

**Classroom Teacher:** A staff member assigned the professional activities of instructing pupils in self-contained classes or courses, or in classroom situations. Usually expressed in full-time equivalents.

**Coefficient of Variation, CV:** The standard deviation expressed as a percent of the mean. Used to compare standard deviations of varying groups of data.

**Current Expenditures:** All amounts spent at all levels of administration—state, intermediate, and local—for public elementary and secondary schools for administration, instructional services, plant operation and maintenance, fixed charges, and other school services (except for community services, capital outlay, and debt service). Includes the cost of operating the state department of education and the intermediate (county) departments of education; employers' (state, intermediate, and local) contributions to retirement systems and/or Social Security on behalf of public school employees.

**Debt:** The major portion of all state and local government debt is long-term indebtedness. A substantial portion of such long-term debt is nonguaranteed debt, i.e., obligations payable solely from pledged earnings of specific activities or facilities, from special assessments, or from specific nonproperty taxes.

**Education:** The provision or support of schools and other education facilities and services.

**Effective Buying Income:** Same as disposable personal income; is obtained by deducting from personal income direct personal taxes and certain other nontax payments to government. The personal taxes deducted include federal, state, and local income taxes, estate and gift taxes, and miscellaneous licenses and permits. Property taxes are not deducted.

**Effort:** A measure that relates the capacity to support public schools (defined as the personal income of the residents of the state) to the revenues obtained, or expenditures made, on behalf of public schools. The latest available personal income data determine the school year for which school revenues and expenditures are chosen for comparison. Personal income for the year shown would be available to pay school taxes or allay school expenditures in that school year.

**Elementary School:** A school classified as elementary by state and local practice and composed of any span of grades not above grade 8. A preschool or kindergarten school is included under this heading only if it is an integral part of an elementary school or a regularly established school system.

**Enrollment:** A cumulative count of the number of pupils registered during the entire school year. New entrants are added, but those leaving are not subtracted.

**Expenditures:** All amounts of money paid out by a government—net of recoveries and other correcting transactions—other than for retirement of debt, investment in securities, extension of credit, or as agency transactions. Expenditures include only external transactions of a government and exclude noncash transactions, such as the provision of perquisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments involved.

**Fall Enrollment:** The count of the pupils registered in the fall of the school year, usually October.

**Fire Protection:** Comprises fire-fighting and fire-protection activities of local governments.

**Full-Time Equivalent Employment:** A computed statistic representing the number of full-time employees that could have been employed if the reported number of hours worked by part-time employees had been worked by full-time employees. This statistic is calculated separately for each function of a government by dividing the "part-time hours paid" by the standard number of hours for full-time employees in the particular government and then adding the resulting quotient to the number of full-time employees.

**Functions:** Public purposes served by governmental activities (education, highways, public welfare, etc.). Expenditures for each function include amounts for all types of expenditures serving the purpose concerned.

**General Expenditures:** All expenditures of a government other than utility expenditures, liquor store expenditures, and insurance trust expenditures.

**General Revenue:** All revenue of a government except the kinds of revenue classified as utility revenue, liquor store revenue, and insurance trust revenue. All tax collections, even if designated for insurance trust or local utility purposes, are classified under general revenue.

**General Sales Taxes:** Sales or gross receipts taxes that are applicable, with only specified exceptions, to all types of goods and services or all gross income, whether at a single or at classified rates.

**Health:** Health services, other than hospital care, including health research, clinics, nursing, immunization, and other categorical, environmental, and general public health activities. School health services provided by health agencies (rather than school agency) are included.

**Highways:** Streets, highways, and structures necessary for their use; street lighting; snow and ice removal; toll highway and bridge facilities; and ferries.

**Higher Education:** Includes facilities and activities of all education institutions beyond the high school level operated by state or local governments, except that agricultural experiment stations and agricultural extension services are classified under natural resources, and university-operated hospitals serving the public are classed under hospitals.

**Hospitals:** Establishment and operation of hospital facilities, provision of hospital care, and support of other public or private hospitals.

**Household:** A unit that includes all persons occupying a house, apartment, or room regarded as a dwelling unit, excluding group quarters such as dormitories.

**Individual Income Tax:** Taxes on individuals measured by net income and taxes imposed on special types of income (e.g., interest, dividends, and income from intangibles).

**Instructional Staff:** Full-time equivalent number of positions, not the number of different individuals occupying the positions during the school year. In local schools includes all public elementary and secondary (junior and senior high) day school positions that are in the nature of teaching or in the improvement of the teaching-learning situation. Includes consultants or supervisors of instruction, principals, teachers, guidance personnel, librarians, psychological personnel, and other instructional staff. Excludes administrative staff, attendance personnel, health services personnel, clerical personnel, and junior college staff. In institutions of higher education includes those engaged in teaching and related academic research in junior colleges, colleges, and universities, including those in hospitals, agricultural experiment stations, and farms.

**Interest on Debt:** Annual expenditures to pay interest only on long-term debt.

**Live Births:** Number of births in the United States.

**Mean:** The arithmetic average of the data.

**Median:** The middle number in a group when data are arranged in numeric sequence.

**Noninstructional Staff:** In local schools includes administrative and clerical personnel, plant operation and maintenance employees, bus drivers, and lunchroom, health, and recreational personnel engaged by school systems. In institutions of higher education includes cafeteria, clerical, and custodial workers in colleges and universities, hospitals, agricultural experiment stations, and farms.

**Personal Income:** State personal income is the current income received by residents of the states from all sources, including transfers from government and business, but excluding transfers among persons. It is a before-tax measure. The total includes both monetary and nonmonetary income of individuals and income received in kind. It also includes the investment income of nonprofit institutions serving individuals as well as the investment income of private trust funds and private noninsured welfare funds.

**Police Protection:** Preservation of law and order and traffic safety. Includes highway police patrols, crime prevention activities, police communications, detention and custody of persons awaiting trial, traffic safety, vehicular inspection, and the like.

**Property Taxes:** Taxes conditioned on ownership of property and measured by its value. Includes both general property taxes (i.e., relating to property as a whole, real and personal, tangible or intangible, whether taxed at a single rate or at classified rates) and special property taxes (i.e., on selected types of property, such as motor vehicles or certain or all tangibles, subject to rates that are not directly related to rates applying to general property taxation).

**Public Welfare:** Support of and assistance to eligible persons contingent upon their need. Excludes pensions to former employees and other benefits not contingent on need. Expenditures under this heading include cash

assistance payments directly to needy persons under categorical and other welfare programs; vendor payments made directly to private purveyors for medical care, burials, and other services provided under welfare programs; welfare institutions; and any intergovernmental or other direct expenditures for welfare purposes. Any services provided directly by the government through its hospital and health agencies are classed under those headings.

**Range:** The difference between the highest and lowest values in a group of data.

**Resident Population:** In addition to those who are residents of an area, also includes armed forces personnel who are stationed in the area.

**Revenue:** Revenue receipts for public school purposes from LOCAL, intermediate, and other sources include all funds for direct expenditures by local and intermediate districts for school services, for the operation of intermediate departments of education, for employer contributions to retirement systems and/or Social Security on behalf of public school employees, for the purchase of materials for distribution of local school districts, etc. Includes net receipts from revolving funds or clearing accounts only when such funds are available for general expenditure by the local board of education. Includes gifts and tuition and fees received from patrons.

Revenue receipts from STATE sources include all funds for the operation of the state department of education, for state (employer) contributions to retirement systems and/or Social Security on behalf of school employees, for grants in aid to intermediate and local school districts for school purposes (including funds available from state bond issues for such grants and the costs of textbooks, buses, supplies, etc., purchased by the state for distribution to local school districts), for the payment of interest on state bonds issued to provide grants to local school districts, and all other state revenue for public school purposes. Money collected by the state as an agent of a lesser unit and turned over in like amounts to that unit is not included.

Revenue receipts from FEDERAL sources include money distributed from the federal treasury either directly to local school districts or through the state and county, including grants for vocational education, for aid to federally affected areas, for school lunch and milk programs, for educating American Indians in local public schools, and money derived from federal forest reserves and federal oil royalties.

**Revenue from Own Sources:** All revenue of a government (taxes and other) except intergovernmental.

**School District:** An education agency at the local level that exists primarily to operate public schools or to contract for public school services. Synonyms are "local basic administrative unit" and "local education agency."

**School-Age Population:** Population age 5 through 17, inclusive (excluding armed forces abroad).

**Secondary School:** A school comprising any span of grades beginning with the next grade following an elementary or middle school (usually 7, 8, or 9) and ending with or below grade 12. Both junior high schools and senior high schools are included.

**Standard Deviation, SDEV:** A statistical technique measuring the extent to which data vary from their mean. Used to indicate the relative dispersion of individual items.

**Taxes:** Compulsory contributions exacted by a government for public purposes, except employee and employer assessments for retirement and social insurance purposes, which are classed as insurance trust revenue. All tax revenue is classified under general revenue and comprises amounts received (including interest and penalties but excluding refunds) from taxes imposed by the recipient government. Amounts received by a government from a tax it imposes are counted as tax revenue of that government, even though initially collected by another government; however, any amounts retained are treated as tax revenue of the collecting government. Tax amounts subsequently distributed to other governments are classified as intergovernmental transactions.

**Total Revenue Receipts:** Includes all revenue receipts available for expenditure for current expenses, capital outlay, and debt service for public schools, including all appropriations from general funds of federal, state, county, and local governments; receipts from taxes levied for school purposes; income from permanent school funds and endowments; income from leases of school lands; interest on bank deposits; tuition; gifts; etc. Amounts that increase the school indebtedness or that represent exchange of school property for money are excluded.
